

Series 307 Vacuum Gauge Controller Instruction Manual Addendum

Three process control relays on Ion Gauge, option 307267

Introduction

The process control module provides the Series 307 vacuum gauge controller with single-pole, double-throw relays that can be controlled by digital setpoints or by the built-in manual override switches.

The 307267 six process control module provides three relays on the ion gauge channel, two relays assigned to the CGA or TCA, and one relay assigned to CGB, TCB, or CMB.

Refer to Chapter 5, The Process Control Module, of instruction manual #307024, Series 307 Vacuum Gauge Controller, for complete instructions on the operation of the process control relays.
