

Microscope Slide Coverslips

Instructions for Use

For in vitro diagnostic use.

For use by trained professionals only.

Intended Use

Microscope slide coverslips are suitable for cellular and tissue specimen preparation for microscopic analysis intended for diagnostic use

Microscope slide coverslips serve as a physical barrier to protect the specimen from mechanical forces and environmental exposure

General Information

- Microscope slide coverslips are suitable for the preparation of cellular and tissue specimen
- Microscope slide coverslips should be brought to room temperature before they are used
- Microscope slide coverslips are for single use only
- If for any reason you believe that your test result is equivocal, you should follow your laboratory standard operating procedures
- When using the microscope slide coverslips in instruments, the usage instructions from the manufacturer regarding the safe operation of their instrument, dyes, and chemicals should be followed

Instructions

- Apply a small amount of mounting medium to the surface of the slide; try to use an amount that will just fill the space under the coverslip
- Remove coverslip containing the sample from the buffer
- Blot excess buffer or solvent from the non-sample surface of the coverslip (or allow it to air-dry and then remove the salt residue before imaging)
- Slowly tip the coverslip onto the mounting medium, and avoid creating bubbles as you lower it into place
- Cure and seal if required

Warnings and Precautions

- Be aware of the possibility of breakage when dealing with the microscope slide coverslips and take the appropriate safety measures, e.g. wearing gloves and eye protection
- Do not use microscope slide coverslips if product is damaged

Caution

 Human samples are potentially biohazardous. Follow standard procedures for handling, storage and disposal of human samples

Storage, Archiving and Disposal

- Store product under clean and dry conditions at ambient temperature (15-30 °C)
- The product should be kept off floors, away from doors and heating/air conditioning ducts to minimize temperature and humidity changes
- Avoid large variations in temperature during both storage and usage. Cooling of the microscope slide coverslips can lead to formation of condensation between the pieces of glass which may impact performance
- Microscope slide coverslips should be allowed to come to room temperature in the lab before they are opened
- Product stock should be rotated. Rotation is the first line of defense against temperature and humidity changes resulting in moisture contamination. Use older products in storage first by using FIFO principle (First In, First Out)
- Archive, store and dispose of microscope slide coverslips per established laboratory protocols

Note:

Any serious incident that has occurred in relation to the device shall be reported to the manufacturer and the competent authority of the Member State in which the user and/or the patient is established.
