Re: Fit and Function of InLab Expert Pro ISM-IP67-10m

METTLER TOLEDO has recently updated the InLab electrode portfolio to enhance durability and usability of electrodes, including part number 51344104, the InLab Expert Pro ISM-IP67-10m electrode.

In updating the features of the electrode, the functional components of the device, including the pH sensing glass and the reference system, remain unchanged.

As a part of the portfolio update, this electrode has been renamed, with the new name being: InLab Expert Go 10m ISM.

The fit and function of the above mentioned electrode are identical, and unaffected by the recent portfolio update.

Further questions regarding this electrode may be directed to www.mt.com/na-InLab.
