

Competence in Labware

Labware range

Welcome!

VITLAB has over 100 years of tradition. The company VITRI GmbH & Co. KG was established in 1908 in Mühlthal, and the laboratory division was spun off in 1989 as VITLAB. Today, VITLAB is one of the leading manufacturers of liquid handling instruments and performance plastic laboratory products for one-time or long-term use. We develop and manufacture these laboratory products at our own production facility.

Our extensive range of products provides optimal support in your laboratory work in a wide variety of application ranges. Regardless of whether your work involves volume measurement, sampling or storage: VITLAB products will facilitate it while continuing to ensure that you achieve perfect results.

We hope that this new catalogue will serve as a valuable resource to aid in your lab work. We would be glad to respond to your enquiries, and look forward to receiving suggestions and ideas from our users.

This catalogue describes our products and provides all essential information. You will find detailed data regarding the various plastics clearly presented in the chapter entitled “General and Technical Information”. To simplify your search, our product range has been categorised into the following areas of application: volume measurement, saving and storing, bottling and decanting, preparation, separation, and concentration.

Under “Volume Measurement”, for example, you will find our complete product line for liquid handling, including dispensing, pipetting, and titration, as well as a wide variety of classical volumetric instruments such as volumetric flasks, measuring cylinders, and associated accessories.

In addition to the range of products that appears in our catalogue, we also produce plastic products according to customer specification. For example, bottles and beakers required for special tasks can be commissioned with a specified geometry and thickness. Optionally, the products can be printed with an individualised scale or with customised labelling. Labware for promotional use can be designed and printed with a company name and logo. We can even accommodate requests for individualised packaging formats, materials, and designs. Further information is available in the VITLAB® Promotional chapter.

Many possibilities can be realised – don’t hesitate to ask what we can do for you!

VITLAB

Your reliable p

Certified quality

Independent inspections and routine internal audits guarantee the effectiveness of VITLAB's quality management system throughout the entire company, from development to shipment. As a result, the phrase 'Made by VITLAB' has become synonymous with quality.

Over 98% of our product line is made in Germany. Supplemental procedures such as tempering and volume testing are conducted in our own facilities, which guarantees the highest possible product quality and measurement accuracy. Our continuous improvement paradigm supports our goal of 0% failure.

The VITLAB Quality Management System has been continuously certified since January 1994, currently according to DIN EN ISO 9001:2008. Active stewardship of the environment is an equally strong pillar of our business philosophy. VITLAB has been certified according to DIN EN ISO 14001 since May, 1999.

Prompt deliveries Competent customer service

The highly efficient logistics in the Großostheim production facility facilitate the shortest possible delivery times for all products listed in the catalogue. For the standard articles, we strive for an availability of over 94%.

Due to its intensive partnerships with distributors in over 70 countries, VITLAB can offer sound on-site advice, individual support, and quick answers to your questions. Our qualified product training sessions provide comprehensive technical and application-oriented information on using our products. Should problems arise, our expert repair service keeps downtime as short as possible.

VITLAB products can be ordered from specialist dealers worldwide. Our authorised sales partners can be found on the internet at:

www.vitlab.de

Or contact us directly.

For your information

Your contact Customer Service

Our Customer Service staff is at your service to provide you with competent advice and answers to all your queries and questions concerning offers, orders and deliveries. Our Product Management and Sales Team are at your disposal – also “on site” – with any technical information or assistance that you might require for your application.

Clear product statements

Our aim is to provide you with a clear and comprehensive presentation of all relevant product information. For quick reference, we use the following symbols:

DIN ISO-compliant Class A volumetric instruments

CC, conformity-attested products according to DIN ISO, with certificate

Food-safe products according to EC Directive No. 10/2011

Products with high protection for light-sensitive substances

Products individually packaged in PE bags, labelled with the article number, description and EAN code

Products that can be autoclaved at 121 °C (2 bar) according to DIN EN 285. Note restrictions!

CE mark according to EU Guideline 2004/108/EC, 93/68/EEC; 73/23/EEC, and 93/68/EEC

CE-IVD mark according to EU Guideline 98/79/EC

Perfection in Liquid Handling

HIGHEST RELIABILITY IN DISPENSING

VITLAB 
Competence in Labware

VITLAB® Dispenser line: genius, simplex, and TA

VITLAB bottle-top dispensers are available for a broad spectrum of applications in the dispensing of exact volumes. VITLAB® genius and simplex can be used for practically any task, while VITLAB® TA dispensers have been specially developed for use in trace analysis and with highly concentrated media. As they are produced from materials with extremely high chemical resistance, VITLAB bottle-top dispensers are very robust and reliable.

	VITLAB® genius/simplex	VITLAB® TA
Applications	Salt solutions, acids, alkalis, and many organic solvents	Specially for use in trace analysis for dispensing high-purity and highly concentrated acids and alkalis, as well as hydrogen peroxide, bromine and HF
Components in contact with media	Borosilicate glass, FEP, ETFE, PFA, PTFE, platinum-iridium, PVDF (screw cap).	Various fluoroplastics (e.g., ETFE, FEP, PFA, PTFE), Al ₂ O ₃ -sapphire, platinum-iridium or tantalum (depending on the model)
Operating limits	Temperature: +15 °C to +40 °C Steam pressure: max. 500 mbar Viscosity: max. 500 mm ² /s Density: max. 2.2 g/cm ³	Temperature: +15 °C to +40 °C Steam pressure: max. 600 mbar Viscosity: max. 500 mm ² /s Density: max. 3.8 g/cm ³

General guide for dispenser selection (for the classification of dispenser media, see the next page).

Salt solutions	Acids and alkalis	Solvents	High-purity and highly concentrated acids and alkalis	Hydrofluoric acid (HF), bromine, hydrogen peroxide
VITLAB® genius/simplex				
	VITLAB® TA			

Volume measurement

Recommended usage ranges for VITLAB® genius and VITLAB® simplex:

Medium	Medium	Medium
O Acetaldehyde	O Acetic acid	I Hydrochloric acid, 37%
O Acetone	O Chloronaphthalene	I Hydrogen peroxide
O Acetonitrile	I Chromic acid	O Lactic acid
O Acetylacetone	I Chromic-sulphuric acid	I Magnesium chloride
O Acrylic acid	I Copper sulphate	I Mercury chloride
O Acrylonitrile	O Cresol	O Methanol
O Adipic acid	O Cumene (isopropylbenzene)	O Methoxybenzene
O Allyl alcohol	O Cyclohexanone	O Methyl butyl ether
I Aluminium chloride	O Decane	O Methyl formate
O Amino acids	O 1-Decanol	O Methyl propyl ketone
I Ammonia solution	O Di(ethylene glycol)	O Mineral oil (motor oil)
I Ammonium chloride	O Dibenzyl ether	O Monochloroacetic acid, 50%
I Ammonium fluoride	O Dichlorobenzene	I Nitric acid, 60%
I Ammonium hydroxide	O Dichloroethane	O Nitrobenzene
I Ammonium sulphate	O Dichloromethane	O Octane
O Amyl acetate	O Diethanolamine	O Oleic acid
O Amyl alcohol (pentanol)	O Diethyl ether	O Oxalic acid
O Amyl chloride (chloropentane)	O Diethylamine	I Perchloric acid
O Aniline	O 1,2 Diethylbenzene	O Petroleum
I Barium chloride	O Dimethyl sulphoxide (DMSO)	O Phenol
O Benzaldehyde	O Dimethylaniline	O Phenylethanol
O Benzene	O Dimethylformamide (DMF)	O Phenylhydrazine
O Benzoyl chloride	O 1,4 Dioxane	I Phosphoric acid, 85%
O Benzyl alcohol	O Diphenyl ether	I Phosphoric acid, 85% + sulphuric acid, 98%, 1:1
O Benzyl chloride	O Ethanol	O Piperidine
O Benzylamine	O Ethanolamine	O Propanol
O Biuret reagent	O Ethyl acetate	O Propionic acid
I Boric acid	O Formaldehyde	O Propylene glycol (propanediol)
O Bromobenzene	O Formamide	O Propylene oxide
O Bromonaphthalene	O Glacial acetic acid	O Pyridine
O Butanediol	O Glycerine	O Salicylaldehyde
O 1-Butanol	O Glycol (ethylene glycol)	O Salicylic acid
O n-Butyl acetate	O Glycolic acid, 50%	O Silver acetate
O Butyl methyl ether	O Heating oil (Diesel oil)	I Silver nitrate
O Butylamine	O Hexane	O Sodium acetate
O Butyric acid	O Hexanoic acid	I Sodium chloride
I Calcium carbonate	O Hexanol	I Sodium dichromate
I Calcium chloride	I Hydroiodic acid	I Sodium fluoride
I Calcium hydroxide	I Iodine / potassium iodide solution	I Sodium hydroxide, 30%
I Calcium hypochlorite	O Isoamyl alcohol	I Sodium hypochlorite
O Chloroacetaldehyde	O Isobutanol	I Sulphuric acid, 98%
O Chloroacetic acid	O Isopropanol (2-propanol)	O Tartaric acid
O Chloroacetone	O Isopropyl ether	O Tetramethylammonium hydroxide
O Chlorobenzene	O Methyl ethyl ketone	O Toluene
O Chlorobutane	I Potassium chloride	O Turpentine
O Formic acid	I Potassium dichromate	O Xylene
O Gasoline	I Potassium hydroxide	I Zinc chloride
O Methyl benzoate	I Potassium permanganate	I Zinc sulphate
O Pyruvic acid	O Urea	

The above data have been carefully checked and reflect the current state of knowledge. Always follow the instructions for use that accompany the instrument as well as the reagent manufacturer's instruction manual. In addition to the chemicals listed above, solutions of a wide variety of organic or inorganic salts (e.g., biological buffers), biological detergents, and cell culture media can be dispensed. Should you require information on chemicals not listed, please do not hesitate to contact us. Last updated: 03/12.

O Organic media

VITLAB® genius

VITLAB® genius bottle-top dispensers are a family of instruments with proven precision that offer many advantages in routine liquid-handling operations. VITLAB® genius instruments are suitable for a wide variety of applications, and can be used in practically any operation, since the materials that come into contact with media (PTFE, PFA, FEP, borosilicate glass and platinum-iridium) are resistant to most acids, bases, and solvents. Reagent loss while ventilating is avoided with the patented (EP 542 241) recirculation valve. The simple-to-use calibration function helps meet all the requirements for test equipment monitoring without downtime.

VITLAB® genius is equipped with a positive displacement piston and a fluoroplastic (PFA) sealing lip on the cylinder wall. The latter acts like a windscreen wiper to prevent crystal build-up on the cylinder wall from readily crystallisable media. The glass cylinder is also coated with a plastic material that reduces the risk of splashes should breakage occur. The telescopic filling tube can be adjusted smoothly to different bottle heights.

The VITLAB® genius is completely autoclavable at 121 °C (2 bar) according to DIN EN 285, and is certified compliant with DIN 12600.

Included in delivery:

VITLAB® genius with 3 threaded adapters made from PP.

Nominal volumes of 2.5 - 10 ml (screw coupling GL 32) with adapters GL 28, S 40 and GL 45.

Nominal volumes of 25 - 100 ml (screw coupling GL 45) with adapters GL 32, GL 38 and S 40.

Telescopic filling tube (200 - 350 mm), mounting tool, instruction manual, and quality certificate stating all test values.

Volume measurement

VITLAB® simplex

Drawing quantities of liquids from large supply bottles is a daily routine in the lab. This manual task must be carried out quickly, accurately, reproducibly, simply and safely.

VITLAB® simplex bottle-top dispensers are a family of instruments with proven precision that offer many advantages in routine liquid-handling operations. The positive displacement piston in this instrument is equipped with a fluoroplastic (PFA) sealing lip on the cylinder wall. This acts like a windscreen wiper to prevent crystal build-up on the cylinder wall from readily crystallisable media.

The glass cylinder is also coated with a plastic material that reduces the risk of splashes should breakage occur. The telescopic filling tube can be adjusted smoothly to the height of the bottle.

Since the materials in contact with the media (PTFE, PFA, FEP, borosilicate glass and platinum-iridium) are resistant to most acids, bases, and solvents, VITLAB® simplex bottle-top dispensers can be used in practically any operation.

The VITLAB® simplex is completely autoclavable at 121 °C (2 bar) according to DIN EN 285, and is certified compliant with DIN 12600.

Included in delivery:

VITLAB® simplex with 3 threaded adapters made from PP.

Nominal volumes of 2.5 - 10 ml (screw coupling GL 32) with adapters GL 28, S 40 and GL 45.

Nominal volumes of 25 - 100 ml (screw coupling GL 45) with adapters GL 32, GL 38 and S 40.

Telescopic filling tube (200 - 350 mm), mounting tool, instruction manual, and quality certificate stating all test values.

Bottles for VITLAB® genius and simplex

Threaded brown glass (soda lime glass) bottles with an ethylene acrylate coating for increased safety, and a screw cap. The plastic coating significantly reduces hazardous glass splintering during breakage. The maximum working temperature for coated bottles is 80 °C. To preserve the coating, do not clean at temperatures exceeding 60 °C.

VITLAB® TA

NEW

The new Dispenser VITLAB® TA is the dispensing instrument of choice for fulfilling the strictest purity requirements for trace analysis. A special cleaning procedure, well proven in practice, is employed prior to the use in trace analysis, making it possible to operate in an extremely contamination-free manner.

- The parts that are in contact with media are made of various fluoroplastics (e.g. ETFE, FEP, PFA, PTFE), Al₂O₃-sapphire, platinum-iridium or tantalum (depending on model)
- The release of trace metal content can be kept in the low ppb, and depending on application, even in the ppt range
- Exchangeable valve spring: A platinum-iridium or tantalum valve spring can be used, depending on the application
Pt-Ir is suitable for hydrofluoric acid or sodium hydroxide
Tantalum is suitable for dispensing hydrogen peroxide
- A field-tested cleaning process to employ before use in trace analysis is described in the instruction manual
- Outstanding chemical resistance, especially to aggressive media such as highly concentrated acids and alkalis, hydrogen peroxide, hydrofluoric acid, and bromine
- Modular structure for simply dismantling while cleaning and for replacing the dispensing cartridge

Graduation 0.2 ml
A* ≤ ± 0.5 % / 50 µl
CV* ≤ 0.1 % / 10 µl

* Error limits according to DIN EN ISO 8655-5, based on nominal volume (= maximum volume) printed on the instrument if the instrument, the environment and dist. H₂O are at the same temperature (20 °C). Testing takes place according DIN EN ISO 8655-6 with a completely filled instrument and with uniform and smooth dispensing.

Certified DIN 12 600 compliance.

Included in delivery:

VITLAB® TA dispenser with adjustable variable volumes, certified compliant according to DIN 12600, with quality certificate, telescoping filling tube, mounting tool, GL 28/S 28 (ETFE), GL 32 (ETFE), and S 40 (PTFE) bottle adapters, and instruction manual. Optionally with or without recirculation valve.

Volume measurement

VITLAB® piccolo

For dispensing tiny quantities of liquids in all areas of biochemical and medical research.

Even the smallest quantities can be dispensed directly from the bottle with the VITLAB® piccolo - a big help, particularly for serial dispensing operations. Special advantage: Disposable tips are unnecessary. This reduces costs.

The ergonomic design makes dispensing effortless and stress-free. The VITLAB® piccolo can be operated with only one hand. Use the thumb to depress the volume dispensing button, just as with a pipette, and a reset mechanism refills the volume automatically.

The discharge tube can be rotated over 360° so that it is always optimally situated with respect to the bottle label.

In order to guarantee high resistance to chemicals and a broad range of applications, only high-quality materials, such as PTFE, PFA, ETFE, FEP, borosilicate glass, and platinum-iridium come in contact with the media.

VITLAB® piccolo 1 with a fixed volume

VITLAB® piccolo 2 with two fixed volumes

Included in delivery:

VITLAB® piccolo 1 or 2 with GL 28 connecting threads, mounting tool, and instruction manual.

Perfection in Liquid Handling

R A P I D A N D A C C U R A T E T I T R A T I O N

VITLAB 
Competence in Labware

VITLAB® continuous E/RS

Chemical volumetric analysis with small and the most minute liquid volumes requires substantial concentration. The VITLAB® continuous bottle-top burette (Figure 1) enables continuous titration, which leads to rapid, convenient, and accurate results. The angled display shows 4-position titration volume in large, easily read numbers (Figure 2), which simplifies operation. Turning the two hand wheels supplies the titration medium in a continuous and pulse-free manner via the patented double-piston pump (EP 801 982) (Figure 3). Filling procedures are not necessary. This innovative technology increases safety; its compact design and low centre of gravity reduce risk of overturning, especially with smaller bottles. The height and length of the discharge tube can be adjusted, making it possible to work safely with both short and tall bottles. The patented recirculation system (EP 542 241) prevents the loss of valuable reagent and reduces the risk of splashes. With its simple-to-use calibration function, VITLAB® continuous fulfils the corresponding requirements for test equipment monitoring without instrument downtime. Margins of error are under those specified in the DIN EN ISO 8655-3 standard, even for partial volumes. VITLAB® continuous is certified compliant with DIN 12600.

- Continuous supply of titration medium using a patented double-piston pump
- Continuous, precise control of the titration rate with large, easy-grip hand wheels
- Simple, medium-specific readjustment / calibration using the keypad
- Easily readable, large numbers
- Long operating life using two easily-replaced 1.5 V microbatteries
- No loss of medium thanks to a patented recirculation valve
- Freely rotatable 360° around the bottle for optimal orientation of the label
- Adjustable for various bottle sizes using the corresponding adapter.
- Telescopic discharge tube which can be adjusted in both height and length
- Adjustable telescopic discharge tube suitable for a variety of bottle heights

Included in delivery:

VITLAB® continuous E/RS, with GL 45 connecting threads and GL 32, GL 38 and S*40 (buttress thread) size PP thread adapters, telescopic filling tube (200 - 350 mm), telescopic discharge tube (140 - 220 mm), two 1.5 V microbatteries (LR 03/AAA), instruction manual, and quality certificate.

**Volume dispensed per rotation of the hand wheel

Volume measurement

Recommended range of use for VITLAB® continuous E/RS

The VITLAB® continuous E/RS bottle-top burette can be used for the following titrants up to a concentration of 1 mol/L:

Medium	Medium
Acetic acid	Potassium hydroxide
Ammonium iron (II) sulphate solution	Potassium iodate solution
Ammonium thiocyanate solution	Potassium permanganate solution
Barium chloride solution	Potassium thiocyanate solution
Bromide bromate solution	Silver nitrate solution
Cerium (IV) sulphate solution	Sodium arsenite solution
EDTA solution	Sodium carbonate solution
Hydrochloric acid	Sodium chloride solution
Iodine solution	Sodium hydroxide
Iron (II) sulphate solution	Sodium nitrite solution
Nitric acid	Sodium thiosulphate solution
Oxalic acid solution	Sulphuric acid
Perchloric acid	Tetra-n-butylammonium hydroxide solution
Potassium bromate solution	Zinc sulphate solution
Potassium bromide / bromate solution	
Potassium dichromate solution	

The recommendations in this table have been carefully tested and reflect the most current information available. Always follow the instruction manual for the instrument as well as the reagent manufacturer's specifications. Should you require information on chemicals not listed, please do not hesitate to contact us. As at 03/12.

Threaded bottles for VITLAB® continuous E/RS

Threaded brown glass (soda lime glass) bottles with an ethylene acrylate coating for increased safety, and a screw cap. The plastic coating significantly reduces the hazardous glass splintering during breakage. The maximum working temperature for coated bottles is 80 °C. To preserve the coating, do not clean at temperatures exceeding 60 °C.

Volume ml	Thread GL	Shape	PU	Cat. No.
1000	45	square	1	1671500
2500	45	round	1	1671510

Volume measurement

VITLAB® Dr. Schilling burettes

Burette made of borosilicate glass 3.3, tolerances according to DIN ISO 384 Class B, with high-contrast black markings. Calibrated to deliver 'Ex'. Automatic zero setting. The burette stopcock turns easily and enables fine titration. The holding device for the riser pipe serves as additional shock-proofing.

Materials: burette of borosilicate glass 3.3, PP filling tube, PMP/PTFE burette stopcock, and PE-LD reservoir bottle.

VITLAB® micropipettes

NEW

The new VITLAB® piston-operated pipettes are the ideal manual pipettes for demanding laboratory applications, and have all the features required by users: robust, with ergonomic shape and simple operation, completely autoclavable, highly accurate with simple calibration for long-lasting reliability.

- Central, large pipetting button for easy, uniform piston movement
- Large, ergonomic eject button for rapid replacement of the tips
- Simple volume adjustment for right- and left-handers
- Precise, 4-position volume indicator, with integrated zoom function for optimal readability
- Colour-coded for easy selection of the right pipette tip
- Ergonomic finger loop for convenient handling
- Integrated calibration function for easy calibration without the need for tools
- Corrosion-resistant pistons and ejectors for long product life
- Completely autoclavable

The microliter pipettes are certified compliant with DIN 12600, CE-IVD compliant, and completely autoclavable at 121 °C (2 bar) according to DIN EN 285.

Included in delivery: VITLAB® micropipette, quality certificate, and instruction manual

VITLAB® micropipette -8/-12 **NEW**

The new VITLAB® -8 and -12 multi-channel pipettes complete the line of VITLAB® piston-operated pipettes, and are characterised by their especially user-friendly operation in the manual pipetting of long series. They have all the features of the VITLAB® single-channel micropipettes: robust, completely autoclavable, highly accurate, with simple calibration for lasting reliability, especially for established multi-channel pipette applications, such as immunological assays, dilutions series, or use with cell cultures in microplate format.

- Lightweight but still robust through the use of innovative plastic materials
- Corrosion-resistant pistons and ejectors for long product life
- Manifold with 360° free rotation in either direction, to offer optimal working positions
- Integrated calibration function for easy calibration without the need for tools
- Ergonomic finger loop for convenient handling
- Short stroke of only 12.5 mm to reduce the risk of muscle disorders (e.g., RSI)
- Central, large pipetting button for easy and uniform piston movement
- The combination of the stepped design of the ejector and special rings made from FKM reduces the effort needed for ejecting the tips
- Especially service-friendly: Shafts and seals can be easily removed, and thus can be directly cleaned or replaced in the laboratory making it possible to avoid long downtime or repairs
- Completely autoclavable

The multi-channel pipettes are certified compliant with DIN 12600, CE-IVD compliant, and completely autoclavable at 121 °C (2 bar) according to DIN EN 285.

Included in delivery: VITLAB® micropipette -8/-12, quality certificate, and instruction manual

Silicone oil for pipettes, 5 ml / 10 ml	1	1672016

Pipette tips, PP

NEW

The pipette tips are certified compliant, CE marked according to the IVD Guideline 98/79 EC and optimally suited for VITLAB® microliter pipettes. In addition, they are also suitable for numerous other types of pipettes. VITLAB® pipette tips are made from high-quality polypropylene and are autoclavable at 121 °C (2 bar) according to DIN EN 285.

H I G H E F F I C I E N C Y P I P E T T I N G

VITLAB 
Competence in Labware

VITLAB pipeo®

For all pipettes from 0.1 to 100 ml.

With the VITLAB pipeo® pipette controller, pipette handling is simple and comfortable. The ergonomic handle - very light weight at about 190 grams - and excellent balance all contribute to ease of operation. The speed can be adjusted easily, continuously and exactly with one hand using two buttons. A 50 ml pipette can be filled comfortably in less than ten seconds. The liquid release can be done either by gravity delivery when calibrated 'Ex' (to deliver), or in blow out mode using the battery-operated motor.

Pipettes are held securely and tightly in the exchangeable adapter. Liquid vapours are purged directly to protect the instrument,

The charge level of the recyclable battery is shown in the LED display. Defective batteries are easily replaced. To avoid surprises, the LED display changes from green to red two hours before the battery must be recharged. The VITLAB pipeo® can still be operated while the battery is being recharged.

Included in delivery:

VITLAB pipeo®, battery charger, battery, one battery compartment cover, two replacement 0.2 µm membrane filters, instruction manual.

Type	PU	Cat. No.
pipeo® with battery charger for the European continent 230 V/50 Hz	1	1631500

pipeo® with battery charger for Australia 230 V/50 Hz	1	1631520
pipeo® with battery charger for Japan 100 V/50 Hz	1	1631530
pipeo® with battery charger for USA 120 V/60 Hz	1	1631540

Volume measurement

VITLAB maneus®

NEW

The VITLAB maneus® pipette controller enables both left- and right-handers to operate all normal bulb and graduated pipettes easily and fatigue-free. Its safe and easy handling allows even inexperienced users to adjust the meniscus precisely.

With the new design, unscrewing the adapter enables easy and fast replacement of the hydrophobic membrane filter, which protects the instrument against fluid penetration.

The valve system is optimised so that liquids can be drawn up simply, without exerting pressure. The highly sensitive filling and discharge of liquids are controlled gently by the pipetting knob. Thus, the suction element provides rapid filling of the pipette (capacity: 50 ml in less than 10 seconds). The discharge bellows are used for the emptying (blow-out) of the pipette. The specially moulded intake cone ensures secure seating for all normal bulb and graduated pipettes (0.1 to 100 ml).

The VITLAB maneus® is simple to dismantle, easy to clean, and completely autoclavable at 121 °C (2 bar) according to DIN EN 285.

For all normal bulb and graduated pipettes from 0.1 to 100 ml. With replacement 3 µm membrane filter and instruction manual.

Type	PU	Cat. No.
maneus®	1	1630500

25	Red	1	324794

Competence in Volume Measurement

MEASUREMENT TO THE HIGHEST DEGREE

VITLAB 
Competence in Labware

The very highest volumetric instr

Volume measurement is a routine laboratory operation. Therefore, volumetric instruments such as volumetric flasks, measuring cylinders and pipettes are standard equipment in any analytical laboratory.

The importance of the standard of measurement accuracy in your routine laboratory operations cannot be overstated. VITLAB has decades of experience in the development and production of laboratory products which are used to measure volumes. VITLAB is the first manufacturer to produce Class A measuring cylinders from PMP that are certified compliant according to DIN 12681.

All Class A PMP volumetric flasks are optionally available in transparent or UV-absorbing variations for light-sensitive substances.

t precision in uments

Calibration

Type "Ex": The delivered quantity of liquid corresponds to the volume printed on the instrument (pipettes and burettes).

Type "In": The contained quantity of liquid corresponds to the volume printed on the instrument (volumetric flasks and measuring cylinders).

VITLAB calibrates each individual volumetric flask "to contain" (In) at a reference temperature of 20 °C. The hydrophobic characteristics of the materials in plastic volumetric instruments lead to the measured volume being the same as the delivered quantity ("In" = "Ex") for aqueous solutions.

Accuracy classes

Class A: The volume tolerances lie within the limits specified by DIN and ISO.

Class B: The volume tolerances are twice the error limits for Class A specified by DIN and ISO. Detailed explanations on "accuracy in volume measurement" are available in the chapter on "General and Technical Information".

Certificate of conformity

The certificate of conformity is VITLAB's guarantee that the respective products comply with the German Calibration Regulations. The special manufacturing process developed by VITLAB, and the proven VITLAB quality management system, ensure compliance with the volume tolerances specified by the standards.

Volumetric flasks, PFA, Class A, with screw cap, PFA

Highly transparent

Ring mark individually calibrated to 'In'.

Class A tolerances according to DIN EN ISO 1042.

The PFA screw cap guards against contamination.

Outstanding chemical resistance, can be used with strong oxidants, highly concentrated acids and alkalis, hydrocarbons, and ketones.

With laser-engraved lot number and batch certificate. Thermal stress up to 121 °C (auto-claving) does not permanently exceed the tolerance limit.

To preserve the ring mark, do not clean at temperatures exceeding 60 °C.

The advantages of PFA

- Long-term maintenance of low-concentration reference materials in PFA containers
- No memory effects
- Practically no carryover, no cross-contamination due to the extremely hydrophobic, anti-adhesive and smooth surfaces
- High thermal stability, from -200 °C to +260 °C
- Chemical inertness against nearly all chemicals
- Good transparency and dimensional stability, suitable for volumetric instruments
- Easy to clean
- Use of high purity raw materials

Further information on PFA can be found starting on page 132.

Volume measurement

Graduated cylinders, PMP, Class A, CC, tall shape, raised scale

Crystal clear. Certified compliant.

With a raised scale and ring marks at the primary scale points, calibrated 'In'.

The lot certificate supplied bears the batch number and the actual nominal value ascertained under the test conditions. The resulting deviations from the nominal value fall well under the allowed tolerances of Class A according to DIN 12681 and ISO 6706. With the laser engraved batch number and the year of manufacture.

Hexagonal base with bottom studs provides high stability. Thermal stress up to 121 °C (autoclaving) does not cause tolerance limits to be permanently exceeded.

Pipette Helpers
can be found on pages 34-36.

Volume measurement

Pasteur pipettes, PE-LD

Disposable. Very good reproducibility of the number of drops per milliliter, thus ideal for distributing aliquots of liquid portions. Pasteur pipettes can be deep-frozen when filled, or if needed, be converted into sealed vessels through heat-sealing. The integrated suction bulb can readily be compressed. Thus, finger fatigue from frequent pipetting is avoided. Can be sterilised with gas or gamma radiation.

Figure No.	Graduations/ divisions ml	Max. suction volume ml	Tip outer diameter mm	Length mm	Number of drops per ml	PU	Cat. No.

Griffin beakers, PFA

Transparent. With a raised scale. Excellent chemical resistance and very high thermal stability from -200 to +260 °C.

Autoclavable at 121 °C (2 bar) according to DIN EN 285.

The advantages of PFA

- Especially suitable for use in trace analysis
- Ideal for sensitive and valuable samples
- Long-term maintenance of low-concentration reference materials in PFA containers
- No memory effects
- Practically no carryover, no contamination due to the extremely hydrophobic, anti-adhesive and smooth surfaces
- High thermal stability, from -200 °C to +260 °C
- Chemical inertness against nearly all chemicals
- Good transparency and dimensional stability
- Easy to clean
- Use of high purity raw materials

Further information on PFA can be found starting on page 132.

Erlenmeyer flasks, PMP with PP screw cap

Crystal clear, wide-mouth, can also be used with NS stoppers (not included).

Ideal for use as a receiving vessel in titrations.

Well suited for storage and cultivation of cell cultures. Far safer than glass flasks for use in incubator shakers due to the break resistance of plastic. Suitable for microwaves.

To preserve markings, cleaning at no higher than 60 °C is recommended.

Competence in Plastic Labware

SAVING AND STORAGE WITH CONFIDENCE

VITLAB 
Competence in Labware

VITsafe™ – the safety wash bottles

The VITsafe™ safety wash bottles will meet your safety requirements, especially when working with dangerous chemicals.

VENT-CAP

The metal-free VENT-CAP (patent pending), bright red coloured screw cap reduces excess static overpressure according to the principle of gas / steam permeability. Dripping is thus almost completely eliminated.

Safety imprint

VITsafe™ safety wash bottles are permanently printed in accordance with the Directive (EC) No. 1272/2008 (GHS), as well as with all important information. Includes material name in German, English, French and Spanish, hazard pictogram with signal word, chemical formula, CAS number, H-phrases, P-phrases and NFPA code.

Narrow-mouth or wide-mouth

VITsafe™ safety wash bottles are available in narrow- and wide-mouth styles. The especially large opening in the wide-mouth bottle permits simple refilling without a funnel. Select the safety wash bottles to fit your requirements from among 17 different material names and three volumes.

Saving and storing

VITsafe™ safety wash bottles, narrow-mouth

Bottles from PE-LD or PP, spray tube from PP.

More safety due to the durable safety imprint in accordance to Directive (EC) No.

1272/2008 (GHS), as well as with all important information:

- Material name in German, English, French and Spanish
- Chemical formula, CAS No., hazard pictogram, signal word
- Risk phrases (H phrases), safety phrases (P phrases), as well as NFPA Code

Precise spray jet and optimised medium backflow through the continuous and finely drawn

tip of the spray tube. Practically no leakage or dripping with the bright red

VENT-CAP screw cap, the design of which prevents almost all static overpressure.

PFA-economy wash bottles

“PFA-economy” quality wash bottles. Transparent.

With recycled PFA content. Thus, reasonably priced and environmentally friendly.

PFA-economy bottles have excellent chemical resistance and high thermal stability from -200 °C to +260 °C and can be used for less critical applications for which pure PFA is not necessary.

Screw cap made from ETFE, spray tube from FEP.

Precise spray jet and optimised medium backflow through the continuous and finely drawn tip of the spray tube.

Spray bottles, PP

White or transparent bottles made from PP.

Sprayer insert with stable, smoothly operated pump trigger and adjustable spray nozzle, which can be regulated from the finest mist (nebulising) to a precise liquid jet.

Range: approx. 3-4 meters.

Ideal for spraying detergents or disinfectants, especially into difficultly accessible areas, as well as applications in thin layer chromatography.

Volume ml	Colour	PU	Cat. No.
400	white	5	53510
850	white	5	53610
1000	transparent	5	95286

Narrow-mouth bottles, PFA

Transparent.

With screw cap with buttress threads made of PFA. Ideal for long-term storage of high-purity oxidants, acids, alkalis, as well as hydrocarbons, trace analysis solvents and standards.

The advantages of PFA

- Long-term maintenance of low-concentration reference materials in PFA containers
- No memory effects
- Practically no carryover, no cross-contamination due to the extremely hydrophobic, anti-adhesive, smooth surfaces
- High thermal stability, from -200 °C to +260 °C, autoclavable
- Chemical inertness against nearly all chemicals
- Good transparency and dimensional stability
- Easy to clean
- Use of high purity raw materials

Further information on PFA can be found starting on page 132.

Wide-mouth bottles, PFA

Transparent.

With screw cap made of PFA with buttress threads. Ideal for long-term storage of high-purity oxidants, acids, alkalis, as well as hydrocarbons, trace analysis solvents and standards.

The advantages of PFA

- Long-term maintenance of low-concentration reference materials in PFA containers
- No memory effects
- Practically no carryover, no cross-contamination due to the extremely hydrophobic, anti-adhesive, smooth surfaces
- High thermal stability, from -200 °C to +260 °C, autoclavable
- Chemical inertness against nearly all chemicals
- Good transparency and dimensional stability
- Easy to clean
- Use of high purity raw materials

Further information on PFA can be found starting on page 132.

Screw caps, PFA

Transparent. For sealing all PFA containers with GL threads or buttress threads. Autoclavable at 121 °C (2 bar) according to DIN EN 285.

The advantages of PFA

- Especially suitable for use in trace analysis
- Ideal for sensitive and valuable samples
- Long-term maintenance of low-concentration reference materials in PFA containers
- No memory effects
- Practically no carryover, no cross-contamination due to the extremely hydrophobic, anti-adhesive and smooth surfaces
- High thermal stability, from -200 °C to +260 °C, autoclavable
- Chemical inertness against nearly all chemicals
- Good transparency and dimensional stability
- Easy to clean
- Highly pure starting materials used

Drying rack

Back plate and trough made from PVC with drainage nozzle.
With 75 metal pegs with PE coating for hanging various sizes of apparatus.
With two bore holes for simple wall mounting.
Delivered without installation hardware.

Size mm	PU	Cat. No.
450 x 630	1	76299

Drying rack, PS

With wide draining trough and drainage nozzles.
Rack with 72 pegs 95 x 15 mm. For drying larger apparatus, some of the pegs can be removed and the bore holes closed at the rear.
Delivered complete with drainage tube and accessories for the wall installation.
In addition, 11 pegs (95 x 6 mm) are included for objects having a smaller diameter, such as reagent tubes.

Preparation, separation, and concentration

Magnetic stirring bars, octagonal, PTFE

With rings and permanent magnet Alnico V core. The eight-sided shape gives rise to significant turbulence, and thus achieves effective mixing, even at low spin rates. The middle ring also promotes stable centering with convex or uneven bottoms.

8	25	3	310297
14	40	3	310397
12	50	3	310497

Magnetic stirring bars, single spin fin, PTFE

With permanent magnet Alnico V core. With a diameter of only 9 mm, ideal for use in cuvettes and reagent tubes. Easily centered.

Ø mm	Height mm	PU	Cat. No.
9	6	1	317297

Magnetic stirring bars, barbell, PTFE

With permanent magnet Alnico V core. Excellent centering due to the small contact surface, and effective mixing. Disk diameter: 20-mm; shaft diameter: 8-mm.

Length mm	PU	Cat. No.
35	3	3125970
55	3	3126970

Preparation, separation, and concentration

Magnetic stirring bar retrievers, PE

With a permanent magnet on one end and holding ring on the other one.
Magnet is completely encapsulated in a PE mantle.

Length mm	PU	Cat. No.
300	1	318293
450	1	318393

Magnetic stirring bar retrievers, flexible, PTFE

Flexible magnetic stir bar retriever with a total length of 330 mm. Magnet encapsulated.
Ø x L 12.5 x 51 mm. Due to the high flexibility, the magnet stir bar can be retrieved from inaccessible locations, e.g., from the water trap in a laboratory sink.
High chemical resistance, simple to clean.

Length mm	PU	Cat. No.
330	1	318597

Magnetic stirring bar retrievers, PTFE

With PTFE encapsulated magnetic core. Straight shape. High chemical resistance,
simple to clean.

Length mm	PU	Cat. No.
150	1	122097
250	1	122197
350	1	122297

Mortars, MF

White, with spout. Stable circumferential edge. Very stable.

Volume ml	Height mm	Ø mm	PU	Cat. No.
300	75	125	5	72898
500	90	150	5	72998

Pestles, MF

Stirring rod, PP

Spatula-shaped extension for effective manual stirring of small volumes.

Length mm	PU	Cat. No.
245	10	80828

Preparation, separation, and concentration

Water-jet pump, PP

For generation of a vacuum and to siphon off liquids and vapours (if necessary, with a suction main or condensation trap connected upstream).

Pump fluid: Water

Length of the unit: approx. 210 mm (R 3/4" connector fitted)

Weight: approx. 33 g (R 3/4" connector fitted)

- High chemical resistance, since the pumped media only come into contact with polypropylene, FKM and PTFE.
- Operating temperature up to a maximum of 80 °C.
- Integrated non-return valve increases operating safety.
- Simple operation, and easy to clean.
- Detachable vacuum connection.
- Variety of supplied adapters simplify connections to most water sources, and additional reducing adapters are available.

Very low water consumption:

The flow configuration has been optimised, resulting in a 33% reduction of water consumption (190 liters/h at 3.5 bar water supply pressure).

Constant discharge pressure:

The discharge pressure of 16 mbar (water temperature: 12 °C) is reachable across a wide range of water supply pressures of from 3 to 6 bar.

High suction capacity:

The suction capacity is approx. 400 L/hour of air (vs. atmospheric pressure, 12 °C water temperature, 3.5 bar water supply pressure).

Included in delivery:

Water jet pump, including: water supply connection (lock nut R 3/4", reducing adapter R 1/2" and hose connection (olive) with outer diameter 10-12 mm), vacuum connection (olive with outer diameter 6-9 mm, detachable with GL 14 screw cap).

Pumping capacity as function of back pressure

Filtering racks

Funnel holder with base and adjustable height, made from PP, support stand made from aluminium, diameter: 12.7 mm; and, length: 595 mm. To hold from two to four funnels with an upper outer diameter of 50-120 mm.

Positions	Base plate mm	PU	Cat. No.
2	250 x 140	1	78394
4	450 x 140	1	78294

Additional funnels
can be found on pages 102-103.

Support for separatory funnels, PP

For separatory funnels of from 125-500 ml. With practical clamps for simple attachment to stand rods with diameters of 8-14 mm.

Positions	PU	Cat. No.
1	5	80970

Imhoff or sedimentation cone, SAN

According to DIN 12 672. Crystal clear, with raised scale for precise reading of volumes. For simple, basic cleaning and rinsing, the screw coupling on the tip can be removed. Lower breakage risk than for PC or glass containers. For determination of suspended matter in liquids (e.g., for industrial and municipal wastewater).

Graduation:

0 -	2 ml	=	0.1 ml

Preparation, separation, and concentration

Round-bottom flasks, PFA

Transparent, neck with NS 29/32. Can be used as a safety flask with a rotary evaporator. High thermal stability and chemical resistance.

The advantages of PFA

- Especially suitable for use in trace analysis
- Long-term maintenance of low-concentration reference materials in PFA containers
- No memory effects
- Practically no carryover, no cross-contamination due to the extremely hydrophobic, anti-adhesive and smooth surfaces
- High thermal stability, from -200 °C to +260 °C, autoclavable.
- Chemical inertness against nearly all chemicals
- Good transparency and dimensional stability
- Easy to clean
- Use of high purity raw materials

Further information on PFA can be found starting on page 132.

500	177	107	1	107997

Round-bottom flask stand, PP

White, for flasks with a round bottom. Excellent chemical resistance. Autoclavable at 121 °C (2 bar) according to DIN EN 285.

Ø mm	PU	Cat. No.
160	5	80271

Gas wash bottles, PFA

Cap with S 40 buttress threads, and frit made of PTFE. A pore size of approx. 50 µm for optimal optimal pearling of the gas into the liquid. A wide field of application is possible due to the use of high-quality fluoroplastic. Suitable only for non-pressurised operation.

The advantages of PFA

- Especially suitable for use in trace analysis
- Long-term maintenance of low-concentration reference materials in PFA containers
- No memory effects
- Practically no carryover, no cross-contamination due to the extremely hydrophobic, anti-adhesive and smooth surfaces
- High thermal stability, from -200 °C to +260 °C, autoclavable
- Chemical inertness against nearly all chemicals
- Good transparency and dimensional stability
- Easy to clean
- Use of high purity raw materials

Further information on PFA can be found starting on page 132.

Preparation, separation, and concentration

Staining chamber for slides, POM

Consists of staining jar and a staining rack for 25 slides 76 x 26 mm.

L x W x H mm	PU	Cat. No.
100 x 87 x 51	5	99099

Staining rack for slides, POM

For serial staining of 25 slides 76 x 26 mm.
Usable in the staining jar, cat. no. 99199. (see below).

L x W x H mm	PU	Cat. No.
91 x 79 x 38	10	99299

Staining jar for slides, POM

For combination with staining rack, cat. no. 99299 (see above).
Can also be used as a storage box for 25 slides.

L x W x H mm	PU	Cat. No.
100 x 87 x 51	5	99199

Storage boxes for slides, stackable, PS

Storage box for four staining racks, each with 25 slides.
Optionally available with or without staining racks.

Description	L x W x H mm	PU	Cat. No.
With 4 staining racks	192 x 169 x 39	3	99390
Without staining racks	192 x 169 x 39	3	99490

Staining jar, PMP

Crystal clear. For the staining of slides in combination with the staining insert, PP (cat. no. 80354). With 2 lids: one lid to reduce evaporation of the liquid when not in use, the other with a small opening for introducing the staining insert during staining.

L x W x H mm	PU	Cat. No.
103 x 82 x 70	4	80353

Staining insert, PP

With handle. For the staining of up to 20 slides, 76 x 26 mm. Fits in the staining jar, cat. no. 80353.

L x W x H mm	PU	Cat. No.
86 x 70 x 21	2	80354

'Hellendahl' staining chamber, PMP

Crystal clear. With lid. Holds 8 slides, or 16 slides stacked back to back, 76 x 26 mm.

L x W x H mm	PU	Cat. No.
58 x 53.5 x 86	4	80355

Coplin staining chamber, PP

With screw top. For serial staining of 10 slides 76 x 26 mm.

Height mm	Screw cap outer diameter mm	Inner diame- ter mm	PU	Cat. No.
94	50	34	10	136693

Preparation, separation, and concentration

Cuvettes, PS and PMMA

Standard single-use cuvettes are ideal for kinetics measurements, and are supplied in clear, reclosable packaging.

- Cluster number sorting
- Slight deviations in the extinction coefficients
- Optically perfect transmission range
- Recessed window to protect against scratching
- Arrow indicates the direction of radiation

Size:

Cuvette:	12.5 x 12.5 x 45 mm
Window: Macro cuvette	10 x 35 mm
Window: Semi-micro cuvette	4.5 x 23 mm
Layer thickness:	10 mm

Cuvettes made from polystyrene (PS)

Typical range of application	> 340 nm
Standard deviations at 360 nm	Extinction coefficient of 0.005

Cuvettes made from poly(methyl methacrylate) (PMMA)

Typical range of application	> 300 nm
Standard deviations at 320 nm	Extinction coefficient of 0.004

VITLAB[®] Promotional

ADVERTISE WITH YOUR GOOD NAME

Your good name in daily use

Precision is usually of great significance when it comes to ensuring the effective use of granulates, powders or liquids. The transportation, storage and decanting of small volumes often require special containers. VITLAB is one of the leading manufacturers of high-grade plastic labware and specializes in high-precision printing on plastic products with superior chemical and break resistance.

This offers a great advantage: by having your name and logo printed on these products, you will work “hand in hand” with your clients and always maintain a high presence. The products can be used wherever people work with granulates, powders or liquids; for example, in agriculture, laboratories, the medical sector, the food industry and the cleaning

business, as well as when using colours and chemicals.

Plastic labware by VITLAB guarantees that you have the best manufacturing quality and optimal functionality associated with your good name, thus ensuring a sustained positive echo.

A positive echo through individuality

VITLAB develops and manufactures its products at its own production facilities. This allows us to produce and print plastic labware according to your individual requirements and specifications. Please do not hesitate to inform us of your wishes and we will let you know what sort of individual solution we can provide for you.

When it comes to precision and accuracy

Volumetric containers by VITLAB stand out due to the greater precision and accuracy ensured by the measuring scale. On request, VITLAB can also print a customized scale on your product. The quality colours guarantee that the scale remains readable and does not wear off.

Small gifts keep the friendship alive

Plastic products have a high level of usability and are ideally suited as advertising articles or for promotional campaigns for your products. You can have your company name and logo or other motifs printed on them permanently and thus advertise with your good name.

A unique position thanks to an unmistakable design

VITLAB provides advertising materials of the very highest quality with round, conical or flat printing, using screen or pad printing systems and with particularly durable and luminescent colours according to the Pantone and HKS colour table. Various marking techniques, such as laser printing and heat embossing, provide you with an unmistakable design.

Would you like to have more information?

Please do not hesitate to contact us!

Please do not hesitate to contact us for advice on the selection, design and colour of your plastic products. A personal consultant ensures that you receive competent advice from the first meeting to the delivery of the product.

PFA evaporating dish

PTFE beaker

PE-HD bottle

Fluoroplastic PFA

Today, trace analysis operates with concentrations in the range of ng/g (ppb) and pg/g (ppt). Thus, all modern processes require a corresponding trace analytical laboratory hygiene. However, the analytical accuracy of the measurement depends not only on the accuracy of the analytical instrument, but also directly on the judicious selection of container materials and the preparation of the samples themselves. Under these conditions, the fluoroplastic PFA truly shows its worth.

Labware made from polyolefins, such as polypropylene (PP) or polyethylene (PE), has found broad application in modern laboratories. Since catalysts (e.g., Ziegler-Natta or Philipps) are used during the manufacturing process, the constituent elements (frequently Al, Cr, Mg, Si, Ti or Zn) can still be detected in the ultra-trace range, and thus might affect the analysis results. In direct comparison to these manufacturing processes, PFA is especially suitable for trace element analysis because it is manufactured without the use of additives, and therefore cannot become contaminated by the additive components.

In addition to this advantage, PFA has other remarkable properties. PFA can be used for a broad range of applications by virtue of its resistance to almost all organic and inorganic compounds. PFA is one of the most resistant materials after platinum, and is practically chemically inert. Moreover, PFA stands apart with extraordinarily high thermal stability, making it possible to operate in the temperature range of -200 to +260 °C.

For all PFA products, VITLAB uses only high-purity PFA, which is particularly well-suited for trace analysis. For less critical uses, e.g. if the main requirement is a high chemical resistance, VITLAB offers bottles of "economy grade" PFA, which are partly made of recycled PFA. These are favourably priced and also environmentally friendly.

Pictures of the surface structure of PTFE, PFA, and PE-HD with a scanning electron microscope (8000 times magnification).

Technical information

VITLAB's PFA vessels have unique, extremely smooth, liquid-repellent surfaces that are made possible through modern manufacturing processes and acknowledged expertise (see pictures on "Surface Structure"). This is especially significant in the illustrative comparison. The pictures taken in a scanning electron microscope show uneven and irregular surfaces for PE-HD and PTFE, and deep pores and concavities can be identified in the PTFE surface. In contrast to the uneven surfaces, PFA evaporating dishes had to be marked (X) and exhibit a completely smooth, even and uniform surface structure.

Due to this characteristic, all PFA labware is particularly easy to clean and presents hardly any interactions with samples as compared to conventional container materials. With these advantages combined with the minimal water absorption by PFA (< 0.03%), even samples at very low concentration can be stored for long periods of time in PFA containers without changes in their concentration (see the application example on Mercury Standards).

Cleaning after contamination

The valuable properties of PFA, primarily the near absence of memory effects, ensure the reliability of trace analytical results. In comparison with a commercially available glass flask, the simple cleaning after contamination with lead (Pb) solution at a concentration of 1000 ppb (ng/g) is a telling example (see the section on Cleaning of Volumetric Flasks). The cleaning of the glass and PFA volumetric flasks was conducted by shaking with 65% HNO₃ *Suprapur® (Pb < 0.005 ppm) at room temperature. With PFA volumetric flasks, the minimum concentration of 0.003 ppb is reached after three rinses, while substantially higher lead concentrations can be measured in glass flasks even after four rinses. The experiment also shows that PFA labware does not require the usual time-consuming boiling.

*Suprapur® is a trademark of Merck KGaA.

Application Example - Mercury Standards: Storage of an Hg standard in high-purity PFA containers (concentration 2 ppb (ng/g) each).

VITLAB® opaque

Greater protection for light-sensitive substances.

Light-sensitive substances require protection from the effects of light and particularly UV light so that they have a longer usable lifetime. In 2008, VITLAB manufactured the world's first opaque volumetric flasks developed from specially pigmented plastic. The special pigments safely protect samples from the effects of light, while still maintaining high transparency to enable volumes to be set accurately.

The opaque volumetric flasks and reagent bottles safeguard the contained substances with a light protection factor of virtually 20. The absorption spectrum properties exhibited by the products are significantly better over the entire spectral range of 200 - 900 nm versus comparable brown glass products. VITLAB® opaque reagent bottles are especially effective below 560 nm. They have a maximum of 5% transmission at 560 nm, and less than 2.5% transmission measurable at or below 520 nm. The pigments in the opaque products exhibit a brilliant characteristic shine in the UV range starting at 400 nm.

In the UV range from 280 nm and in the upper visible range from 580 nm, VITLAB® opaque reagent bottles and volumetric flasks are thus significantly better than even high-quality brown glass containers. The differences between reagent bottles made of VITLAB® opaque and those of brown glass bottles can be more or less pronounced depending on the type of the glass, since the brown glass bottles are subjected to significantly greater production fluctuations.

The higher break resistance and lower weight are advantageous during daily use in the laboratory, and make VITLAB® opaque an attractive alternative to conventional volumetric flasks and reagent bottles made of brown glass.

Light transmission diagram: Comparison of results for the measurement of transmission (T%) between VITLAB® opaque and brown glass in volumetric flasks and bottles, in the wavelength range of $\lambda = 200$ to 900 nm. VITLAB® opaque provides better protection of the container contents from the effects of light, particularly in the UV range (see diagram below).

Classification and type description of plastics

In general, plastics can be divided into the three groups. The abbreviations of the described plastics used are those according to DIN 7728.

Thermoplastics

Plastics with a linear molecular structure, with or without side chains, can be reversibly moulded through heat treatment without changing their thermoplastic properties. Thermoplastics are frequently used in the production of plastic labware. Hence we provide here a brief description of some of the more important plastics, and explain their molecular structure, as well as their mechanical, chemical and physical properties. The most frequently used thermoplastics are polyolefins, such as polyethylene and polypropylene.

PFA (perfluoroalkoxy copolymer)

- 121°C
- Highly transparent, elastic thermoplastic with high-molecular, semi-crystalline structure
- Very good temperature stability
- Broad range of application, from -200 °C to +260 °C
- Virtually chemically inert, excellent chemical stability against practically all chemicals
- Very low water absorption (< 0.03%)
- Ultra-smooth, anti-adhesive surface with unique surface structure
- Typical products are, for example: Class A volumetric flasks, bottles, sample containers
 - ➔ Especially suitable for use in trace analysis, and for the storage of low-concentration solutions

PTFE Polytetrafluoroethylene

- 121°C
- Non-transparent, white, elastic thermoplastic with high-molecular, semi-crystalline structure
- Very good temperature stability
- Broad range of application, from -200 °C to +260 °C
- Virtually chemically inert, excellent chemical stability against practically all chemicals
- Anti-adhesive surface
- Very good sliding properties and electrical insulating capability (very low friction coefficient)
- Typical products are, for example: Bottles, beakers, sheathing for magnetic stir bars

FEP Tetrafluoroethylene-perfluoropropylene copolymer

- 121°C
- Translucent, white, thermoplastic copolymer with high-molecular, semi-crystalline structure
- Anti-adhesive surface
- Very good temperature stability
- Broad range of application, from -100 °C to +205 °C
- Excellent chemical stability

ETFE Ethylene-tetrafluoroethylene copolymer

- 121°C
- Translucent, white copolymer from ethylene and tetrafluoroethylene
- Very good temperature stability
- Broad range of application, from -100 °C to +150 °C
- Very good chemical stability
- Typical products are, for example: Thread adapters, Griffin beakers, threaded connectors

PMP Polymethylpentene

- 121°C
- Crystal-clear, stiff thermoplastic
- Similar structure to PP, with the methyl group replaced by an isobutyl group
- Good thermal stability
- Range of application from 0 to +150 °C
- Good tensile strength and dimensional stability
- Good chemical stability
- Typical products are, for example: Class A volumetric flasks, Class A measuring cylinders
 - ➔ For the storage of light-sensitive substances, also available in highly transparent, UV-absorbing VITLAB® opaque

Classification and type description of plastics

PP Polypropylene

121°C

- Highly transparent, elastic thermoplastic
- Similar structure to PE, with a methyl group attached to alternate carbon atoms in an isotactic arrangement
- Good thermal stability
- Range of application from 0 °C to +125 °C
- Good tensile strength and dimensional stability
- Good chemical stability, comparable to PE
- Typical products are, for example: Class B volumetric flasks, Class B measuring cylinders, measuring pitchers, sample containers, funnels
 - ➔ For the storage of light-sensitive substances, also available in highly transparent, UV-absorbing VITLAB® opaque

PE-HD High-density polyethylene

- Transparent, elastic thermoplastic
- Good thermal stability
- Range of application from -50 °C to +105 °C
- Compact, with increased tensile strength due to less cross-linking compared with PE-LD
- Good chemical stability
- Better chemical stability to organic solvents compared to PE-LD
- Typical products are, for example: Bottles, buckets, scoops
 - ➔ For the storage of light-sensitive materials, also available in brown-dyed version

PE-LD Low-density polyethylene

- Highly transparent, elastic thermoplastic
- Moderate thermal stability
- Range of application from -50 °C to +80 °C
- Very good flexibility
- Good chemical stability
- Typical products are, for example: Wash bottles, dropping pipettes

PC Polycarbonate

121°C

- Transparent, stiff thermoplastic
- Linear polymer of carbon dioxide
- Very good temperature stability
- Broad range of application, from -130 °C to +125 °C
- Good tensile strength and impact resistance
- Moderate chemical stability
- Typical products are, for example: Desiccators
- Note: Polycarbonates can lose their tensile strength through autoclaving or exposure to alkaline detergents

POM Polyoxymethylene

121°C

- Non-transparent, white, stiff, and high-molecular thermoplastic
- Good thermal stability
- Broad range of application, from -40 °C to +130 °C
- High hardness and dimensional stability
- Good sliding properties and abrasion resistance
- Good chemical resistance to aliphatic, aromatic, and halogenated hydrocarbons, and alkalis. Unstable to acids and esters
- Typical products are, for example: Slide boxes, staining jars
 - ➔ Especially good chemical stability to organic solvents
 - ➔ POM can replace metal in many applications

Classification and type description of plastics

PA Polyamide

- Linear polymers with regularly repeating amide bonds along the main chain
- Good thermal stability
- Range of application from -40 °C to +100 °C
- Outstanding durability and tensile strength, often used as construction material and for metal coatings
- Good chemical resistance to organic solvents
- Readily attacked by acids and oxidising agents
- Typical products are, for example: Spatula

SAN Styrene-acrylonitrile copolymer

- Crystal clear, stiff thermoplastic copolymer
- Moderate thermal stability
- Range of application from -40 °C to +70 °C
- Brittle and dimensionally stable
- Low tendency to form stress cracks
- Moderate chemical stability, SAN is slightly more chemically stable than PS
- Typical products are, for example: Graduated beakers, Class B graduated cylinders

PMMA Poly(methyl methacrylate)

- Crystal clear ("organic glass"), dimensionally stable thermoplastic
- Moderate thermal stability
- Range of application from -50 °C to +65 °C
- Very good UV radiation stability
- Poor chemical stability
- Typical products are, for example: Cuvettes

PS Polystyrene

- Crystal clear, stiff, amorphous or semi-crystalline thermoplastic
- Moderate thermal stability
- Range of application from -20 °C to +70 °C
- Hard, brittle, and dimensionally stable
- Tendency to form stress cracks
- Moderate chemical stability
- Typical products are, for example: Containers, cuvettes

PVC Poly(vinyl chloride)

- Amorphous thermoplastic, transparent with a slight blue tint
- Moderate thermal stability
- Range of application from -20 °C to +80 °C
- Good chemical stability, especially resistant to oils
- The addition of plasticisers opens up many useful applications, ranging from artificial leather to injection moulding components
- Typical products are, for example: Drawer organisers, dishes, trays

Classification and type description of plastics

Thermosets

Plastics with densely cross-linked molecules, which are very hard and brittle at normal temperatures. Heating causes irreversible hardening. These plastics are rarely used for plastic labware. The best known thermosets are the melamine resins. Melamine resin is produced by polycondensation of melamine with formaldehyde.

MF Melamine-formaldehyde resin

- Colourless thermoset, also belongs to the aminoplast group
- Good thermal stability
- Broad range of application, from -80 °C to +120 °C
- High surface hardness, abrasion resistance, and fire resistance
- Good electrical insulator, high creep resistance
- Good chemical stability
- Typical products are, for example: Trays, plates, mixing bowls
- Caution necessary when used in a microwave oven: Heating can release amounts of melamine and formaldehyde that can be harmful to health!

Elastomers

Plastics with loosely cross-linked molecules that exhibit rubber-like elasticity at room temperature. Heating causes irreversible integration (vulcanisation). The best known elastomers are natural rubber and silicone rubber.

NR Natural rubber

- Elastomer obtained from latex (milk-like sap from rubber tree bark) and vulcanised with sulphur to improve the elasticity
- Composed of polymerised isoprene, with an extremely uniform structure
- Moderate thermal stability, not stable to UV
- Range of application from -40 °C to +80°C
- High tensile strength and elongation at rupture
- Poor chemical stability
- Typical products are, for example: pipette filler bulbs

SI Silicone rubber

- Synthetic elastomer in which silicon atoms are linked together by oxygen atoms
- Includes polyorganosilanes that have groups such as hydrogen atoms, hydroxyl groups or vinyl groups for cross-linking reactions
- Very good thermal stability, and resistance to UV, ozone, and weather
- Broad range of application, from -60 °C to +180 °C
- High dimensional stability, even at high temperatures
- Very good durability, even at low temperatures
- Poor chemical stability

EPDM Ethylene-propylene-diene rubber

- Synthetic terpolymeric elastomer
- Manufactured with metallocene or Ziegler-Natta catalysts that utilise vanadium compounds and aluminium alkyl chlorides
- Good thermal stability
- Range of application from -40 °C to +130 °C
- High elasticity, even at low temperatures
- Stable to UV and ozone, and weather-resistant
- Very good chemical stability

Chemical resistance of plastics

With regard to chemical stability, plastics are classified as follows:

+

Very good chemical resistance

Within 30 days, continuous exposure to media causes no damage to the plastic. The plastic may remain resistant for years.

0

Good to limited chemical resistance

Within 7-30 days, continuous exposure to media causes minor damage (e.g. swelling, softening, loss of mechanical strength, discolouration), some of which is reversible.

—

Poor chemical resistance

Not suitable for continuous exposure to media. Immediate damage may occur (e.g. loss of mechanical strength, deformation, discolouration, cracking, liquification).

* Mind the chemical and temperature suitability!

** Caution necessary when used in a microwave oven: Heating can release amounts of melamine and formaldehyde that can be harmful to health!

Cleaning and maintenance of plastics

All polyolefins, such as PE-LD, PE-HD, PP and PMP, as well as the fluoroplastics PTFE, PFA, FEP and ETFE have water-repellent surfaces that are very durable and easy to clean. For cleaning, depending on the level of contamination, commercially available neutral or alkaline detergents can be used. Polycarbonate (PC) labware should not be cleaned with alkaline cleaning agents (> pH 7). Please note that no scrubbing agents or scouring pads should be used for labware made from plastics.

Cleaning with dishwashers

Labware made from the above-named plastics (except for PE-LD, due to the temperature limit) can be cleaned and dried in a laboratory dishwasher together with other apparatus. Machine cleaning with laboratory dishwashers is gentler to labware than cleaning in an immersion bath. The labware is exposed to the cleaning solution for relatively short rinsing periods when sprayed by the jet or injector nozzles. Due to their light weight, we recommend securing the apparatus to be washed with washing nets to prevent them from tumbling in the water jet. Labware is better protected against scratching when the wire baskets in the washing machine are plastic coated.

Cleaning in an ultrasonic bath

Plastic labware may be cleaned in an ultrasonic bath. However, direct contact with the acoustic membrane should be avoided.

Cleaning in trace analysis

To avoid contamination with cations and anions in trace analysis, plastic labware should be allowed to stand with a 1N HCl or HNO₃ solution for a maximum of 6 hours at room temperature, and be rinsed afterwards with purified distilled water. For trace analysis conducted in the concentration range of ng/g (ppb) or pg/g (ppt), containers made of the fluoroplastic PFA are particularly suitable, because they have a smooth surface, are easy to clean without carry-over (memory effects) and interaction with the container material.

Sterilisation of laboratory equipment made of plastics

Autoclaving

Recommended autoclaving protocol

20 minutes at 121 °C (2 bar),
according to DIN EN 285

Autoclaving (steam sterilisation) is defined as the destruction or irreversible inactivation of all reproducible microorganisms under exposure to "saturated steam at a minimum of 120 °C." (DIN 58946-1, 1987). DIN EN 285 specifies a minimum exposure time (t_g) of 20 minutes (killing time and safety margin) at a sterilisation temperature of 121 °C. For the correct sterilisation procedure, including biological safety (DIN EN 285), please contact your hygiene specialist.

Prior to autoclaving plastic labware, ensure that no soiling or residual contamination remains on the equipment. Otherwise, the residual contamination will bake on solidly during the autoclaving process. Even substances that have no effect on the plastic at room temperature can still lead to destruction of the plastic during the autoclaving process. Additionally, microorganisms might not be killed effectively if they are protected by the residual contamination.

Notes on autoclaving

- Containers with screw tops or stoppers must be **open** during autoclaving to allow for pressure equalisation
➔ Autoclaving of a closed container will lead to the deformation or destruction of the container
- Plastic labware should be **stood upright on a level surface** during autoclaving to avoid shape deformation.
➔ Plastic labware should not be laid on its side during autoclaving
- **No mechanical stresses** should be present during autoclaving
➔ For example, do not stack items
- Do not autoclave any container that contains residual contamination or even rinsing agent
- Not all plastics are resistant to steam sterilisation! For example, polycarbonate loses its tensile strength
➔ Mind the temperature limits for the plastics
➔ Autoclavable products are identified with a "121 °C" symbol in this catalogue

The surfaces of some plastics can be attacked by chemicals present during autoclaving, which can cause persistent clouding. Some transparent plastics can absorb minute quantities of steam, which can lead to reversible clouding. This clouding disappears upon drying, which can be accelerated through the use of a drying oven.

Note!

For gas sterilisation, dry heat, and prior to heating in a microwave oven, all closures and stoppers must be removed as well.

Heating plastics in microwave ovens

Many plastics are suitable for use in microwave ovens. More accurate information can be obtained from the Table "Physical Properties of Plastics" on page 148. In this connection, it is important to be mindful of the chemical and temperature stability of the various plastics, and to ascertain whether the particular article and its contents are compatible with the given temperature. When aggressive acids, alkalis, or solvents are to be heated, the use of fluoroplastics is recommended. It is very important to provide for adequate ventilation (e.g., fume hoods).

Prior to the use of plastic labware in a microwave oven, the closures and stoppers must be removed from the apparatus.

Sterilisation* of plastics

Plastics	Autoclave 121 °C, t _e 20 min according to DIN	Heated air 160 °C (dry)	Gas (Ethylene oxide)	Chemical (Formalin, ethanol)	β-/γ-radiation 25 kGy

¹⁾ Frequent autoclaving may reduce mechanical stability!

Suitability of plastics for foodstuffs

The marked products comply with the lawful regulations of the German Consumer Goods Ordinance and/or Directives (EC) No. 1935/2004, (EC) No. 975/2009 and (EC) No. 10/2011 as amended.

In the testing for compliance with the threshold values for the global migration (or respectively, the specific migration threshold values), no determinations exceeded the allowed values. In addition, sensory testing found no olfactory and flavour-related impairments. The testing was implemented according to the 82/711/EEC and 85/572/EEC Guidelines by an independent, accredited institute.

All source materials used in the manufacturing of the products are listed in the German Consumer Goods Ordinance as at 20.12.2006, or respectively, Directive (EC) 10/2011, in accordance with the present attestation. Therefore, they represent permissible source materials in accordance with food law and may be used in the production of food commodities in accordance with the specified restrictions concerning migration threshold values and permissible residual content in the end product.

Marked PP products are suitable for contact with all foodstuff categories providing that a contact period of 24 hours and a contact temperature of 40 °C are not exceeded. Marked SAN products are suitable for contact with all aqueous, alcoholic and fatty foods, providing that a contact period of 24 hours and a contact temperature of 40 °C are not exceeded.

Disposal and Recycling of Plastics

If the disposal of a piece of plastic labware is unavoidable, regional laws and regulations must be observed. Recycling centres can be found in many cities, which are designed for the disposal of recyclable materials. To simplify the task of sorting in these recycling centres, the majority of labware from VITLAB can be easily identified and presorted by using the engraved or imprinted recycling code. Prior to disposal, plastic labware must be cleaned, and sterilised if necessary, according to the currently valid regulations.

To simplify the separation of plastics for recycling, so that these can later be reused as raw material for manufacture, plastic identification labels (number 01-07) have been introduced. This identification scheme was published in 1988 under the title "SPI resin identification coding system" by the Society of the Plastics Industry (SPI). For coding, the commonly used shorthand for plastics according to the DIN 7728 is also used.

SPI number 07 stands for "other". This is used to indicate other plastics such as PMP, PFA, PTFE etc. VITLAB doesn't use the "O"; rather, it identifies the specific raw material with the abbreviation according to DIN 7728 to simplify identification of the plastic for the end user.

CE mark / CE-IVD Guidelines

IVD Guidelines of the EU

On 7 December, 1998, the EU "Guidelines for In Vitro Diagnostic Devices" (IVD Guidelines) were published in the Official Journal of the European Communities, and thus came into force. The Guidelines were transposed into German National Law on 1 January, 2002, as a corresponding modification of the German Medical Devices Act (MPG). Consequently, in vitro diagnostic devices are considered medical devices.

Definition: Medical devices*

Medical devices are all instruments, apparatus, devices, materials, or other objects including software that are intended by the manufacturer for use in humans:

- for the purpose of detection, prevention, monitoring, treatment, alleviation or compensation of diseases, injuries or disabilities;
- for the purpose of investigation, replacement or modification of the anatomy or of a physiological process;
- for the purpose of control of conception. Pharmacologically or immunologically active agents are excluded, as these are regulated by the German Pharmaceuticals Law.

Definition: In vitro Diagnostic Devices (IVD)*

"In vitro diagnostic devices" are medical devices that are used for in vitro investigations of samples derived from the human body, including donated blood and tissue. Included are reagents, calibration substances or devices, control substances or devices, equipment, instruments, apparatus, systems, or also sample containers, if they are specifically intended by the manufacturer for use in medical tests. "In vitro diagnostic devices" serve mainly to provide information on:

- physiological or pathological conditions;
- congenital anomalies;
- monitoring of therapeutic measures.

CE Mark

With the CE mark on a product, the manufacturer affirms that the product complies with the requirements for products of that type established by the EU Guidelines and, as necessary, has undergone the required testing. The manufacturer applies this mark to the product and additionally produces a Conformity Declaration that certifies the conformity of the product with the cited guidelines and standards.

The medical products supplied by VITLAB are all included in the class of in vitro diagnostic (IVD) devices.

This includes, for example:

- VITLAB® micropipettes
- Pipette tips
- Urine bottles
- Microtubes

* See the definitions according to MPG § 3 (Definition of Terms)

Accuracy

What do “tolerance, accuracy, coefficient of variation, and precision” mean in volumetric measurements?

Graphic illustration of precision and accuracy

The dart board simulates the volume range around the centred nominal value, the white dots simulate the different measured values of a specified volume.

Good accuracy: All hits are near the centre, i.e., the nominal value.

Good precision: All hits are close together.

Result: The manufacturing process is well controlled by an accompanying quality assurance program. Minimal systematic deviations and a narrow variance in products. The permissible limits are not exceeded. There are no rejects.

Good accuracy: On average, the hits are evenly distributed around the centre.

Poor precision: No substantial errors, but hits widely scattered.

Result: All deviations are “equally probable”. Instruments exceeding the permissible tolerance should be rejected.

Poor accuracy: Although all hits are close together, the centre (nominal value) is still missed.

Good precision: All hits are close together.

Result: Improperly controlled production, with systematic deviation. Instruments exceeding the permissible tolerance should be rejected.

Poor accuracy: The hits are far removed from the centre.

Poor precision: The hits are widely scattered.

Result: These volumetric instruments are of inferior quality.

Calculation formulae

The accuracy of glass volumetric instruments is commonly defined by “Tolerance Limits”, whereas for liquid handling instruments the statistical terms “Accuracy [%]” and “Coefficient of Variation [%]” have been established.

Tolerance

The term “tolerance” (tol.) in the corresponding standards defines the maximum permissible deviation from the nominal value.

$$\text{Tol.} \geq |V_{\text{lst}} - V_{\text{sol}}|$$

Accuracy

Accuracy (A) indicates the closeness of measured mean volume to the nominal value, i.e., systematic measurement deviation. Accuracy is defined as the difference between the measured mean volume ($\bar{V}$) and the nominal value ($V_{\text{nom.}}$), related to the nominal value in percent.

$$R[\%] = \frac{\bar{V} - V_{\text{sol}}}{V_{\text{sol}}} \cdot 100$$

Coefficient of Variation

The coefficient of variation (CV) indicates the closeness of values from repeated measurements, i.e., random measurement deviation. The coefficient of variation is defined as standard deviation in percent, related to the mean volume.

$$\text{VK}[\%] = \frac{s \cdot 100}{\bar{V}}$$

Partial volumes

(analogous to CV_T %)

Generally, A and CV are based on the actual volume ($V_{\text{act.}}$). These data in percent must be converted to partial volumes ($V_{\text{part.}}$). By contrast, there is no conversion for partial volumes if A and CV are stated in volume units (e.g. ml).

$$R_T[\%] = \frac{V_N}{V_T} \cdot R_N\%$$

Tolerance from A and CV

To a good approximation, the tolerance, e.g. for the actual volume ($V_{\text{act.}}$), can be calculated from the accuracy and coefficient of variation.

$$\text{Tol.} \geq \frac{|R\%| + 2\text{VK}\%}{100\%} \cdot V_N$$

Precision

If the variance in the individual measurement results about the mean volume $\bar{V}$ is given in units of volume, this relates to precision.

Alpha - Index

2-way / 3-way valves	107
2-way connector, PE-HD	105

A

Accessories for VITLAB pipeo® & maneus®	35
Accessories for VITLAB® microlitre pipettes	30
Adapter for VITLAB® continuous E/RS	24
Adapter for VITLAB® genius and simplex	14
Adapter for VITLAB® piccolo	19
Adapter for VITLAB® TA	18
Analytical funnels, PP	116
Apothecary beakers	59

B

Beakers	54 - 59
Bottles	71 - 86
Bottles for VITLAB® continuous E/RS	23
Bottles for VITLAB® genius and simplex	14
Bowl, PP, with lid	94
Bowls, PP	94
Büchner funnels, PP	116
Bucket with spout, PP	95
Buckets, PE-HD	95
Bulb pipettes	49
Burette clamps, PP	26
Burette stopcocks, PMP/PTFE	26
Burettes, borosilicate glass 3.3	25

C

Cans	87 - 89
Caps with dropper inserts, PE-HD	69
Catchment trays, PP	92
Chemical waste disposal system, PE/PP	103
Collectors	59
Coloured wash-bottles, PE-LD/PP	67
Connector 90°, PP	105
Connectors	104 - 106
Connectors, straight, PP	104
Connectors, T-shape, PP	105
Connectors, universal PP	104
Connectors, Y-shape, PP	106
Container, PP	86
Coplin staining chamber, PP	124
Cuvette stand, PP	125
Cuvettes, PS and PMMA	125

D

Desiccator plates, PP and porcelain	122
Desiccators with stopcock, PC	121
Desiccators with stopcock, PP/PC	121
Desiccators, PP/PC	121
Discharge tube for VITLAB® genius and simplex	15
Dishes	91 - 93
Dishes, PVC	93
Dispensing cartridge for VITLAB® TA	17
Disposable pipettes	50
Double spatula	108
Drawer organisers, PVC	93
Dropping bottles, PE-LD	69
Dropping bottles, PE-LD/PE-HD	69
Dropping pipettes	51
Drying racks	98
Drying tube for VITLAB® continuous E/RS	24
Drying tube for VITLAB® genius and simplex	15

E

Erlenmeyer flasks	60
-------------------------	----

F

Filling tubes for VITLAB® genius and simplex	15
Filtering rack	117

Flow monitor	107
Forceps	108
Funnel holders, PP	103
Funnels	101 - 103, 116
Funnels, PP	101

G

Gas wash bottles, PFA	120
Graduated beakers, PP	54
Graduated beakers, SAN	55
Graduated beakers, stackable, PP	55
Graduated cylinders, PMP, Class A, CC, tall shape	45
Graduated cylinders, PMP, Class A, tall shape	45
Graduated cylinders, PP, Class B, short shape	47
Graduated cylinders, PP, Class B, tall shape	46
Graduated cylinders, SAN, Class B, short shape	48
Graduated cylinders, SAN, Class B, tall shape	47
Graduated pipettes	49, 50
Griffin beakers, ETFE	57
Griffin beakers, PFA	56
Griffin beakers, PMP	58
Griffin beakers, PP	58
Griffin beakers, PTFE	57

H

'Hellendahl' staining chamber, PMP	124
Hydrometer cylinder	48

I

Imhoff cone, SAN	118
Instrument trays, MF	92
Instrument trays, MF	91

L

Laboratory trays, PP	92
Large funnels, PE-HD	102
Large funnels, PP	102
Lids for instrument trays, PS	92

M

Magnetic stirring bar retrievers, flexible, PTFE	113
Magnetic stirring bar retrievers, PE	113
Magnetic stirring bar retrievers, PTFE	113
Magnetic stirring bars, barbell, PTFE	112
Magnetic stirring bars, cross shape, PTFE	111
Magnetic stirring bars, double spinfin, PTFE	112
Magnetic stirring bars, octagonal, PTFE	111
Magnetic stirring bars, oval, PTFE	110
Magnetic stirring bars, polygonal, PTFE	110
Magnetic stir bar, single spin fin, PTFE	112
Magnetic stir bar, triangular, PTFE	112
Magnetic stir bars	110 - 112
Magnetic stir bars	110 - 112
maneus®	35
Measuring cup	59
Measuring scoops, PP	100
Microlitre pipettes	28, 29
Microtube stands	96
Microtubes, PP	90
Mixing vessel, MF	94
Mortars, MF	114
Multi-channel pipettes	29
Multi-purpose container, SAN	89

N

Narrow-mouth bottles	71 - 75
Narrow-mouth bottles, PE-HD	72, 75
Narrow-mouth bottles, PE-HD, brown	72
Narrow-mouth bottles, PE-LD	74
Narrow-mouth bottles, PFA	71
Narrow-mouth bottles, PP	73
Non-return valves	106

O

O-rings for desiccators 122

P

Pasteur pipettes 51
 Pestles, MF 114
 PFA-economy narrow-mouth bottles 71
 PFA-economy wash bottles 66
 pipeo® 34
 Pipette baskets 53
 Pipette fillers 36
 Pipette jars 53
 Pipette stands 52
 Pipette tips, PP 31-32
 Pipette trays 52
 Pipette washer 53
 Pipettes 49 - 51
 Pipettes, Piston-operated pipettes 28, 29
 Piston-operated pipettes 28, 29
 Plastic stand for VITLAB® TA 17
 Powder funnels, PP 103
 PTFE-tape 108

R

Reagent bottles, opaque, PP, wide mouth 82
 Reagent bottles, PP 81 - 82
 Reagent reservoir 32
 Reagent tube racks 96, 97
 Recirculation valve for VITLAB® TA 17

General Terms and Conditions of VITLAB GmbH

1. General

- 1.1. (Applicability) These General Terms and Conditions only apply to contractual relations with entrepreneurs (Sec. 14 German Civil Code).
- 1.2. (Conflicting business conditions, written form and contract language) These General Terms and Conditions shall apply to all contracts, including all future contracts with the Customer. Other conditions shall not become a part of the contract even if we do not expressly object to such conditions. Customer may claim validity of additional agreements only before or upon conclusion of the contract and only on our immediate written confirmation. Renunciation of the written form is only possible in writing. The contract language shall be German or English.
- 1.3. (Offers, right to make changes) Our offers are subject to confirmation. We reserve the right to make technical improvements to our products.
- 1.4. (Recording of data) We may store and process relevant contract data in our EDP systems.
- 1.5. (Offset and retention) The Customer shall not be entitled to offset his claims against any other claims but those which are acknowledged, uncontested or final. Furthermore the Customer may offset counter-claims based on a right to refuse performance (Sec. 320 German Civil Code) if those claims are for the payment of a sum of money.
- 1.6. (Rush orders/small orders) Orders having a value of less than 100 euros are subject to a minimum order surcharge of 20 euros. Delivery is normally in packing units as per our valid price list. For deliveries effected within five working days or for order values up to 500 euros, we reserve the right to ship and invoice immediately waiving the requirement for an order confirmation.
- 1.7. (Place of jurisdiction) The place of jurisdiction shall be the court responsible for our domicile in Aschaffenburg, Germany. We are also entitled to appeal to the court responsible for our Customer's domicile. Furthermore, we as Plaintiffs have the right to call upon the arbitral tribunal at the Chamber of Industry and Commerce in Frankfurt am Main. In this case, the arbitral tribunal conclusively decides the legal dispute in accordance with the ICC Rules of Arbitration excluding the due legal process. The initiation of legal dunning proceedings does not imply the exercise of our right to choose the plan of jurisdiction. It is in no way admissible.
- 1.8. German law is applicable, to the exclusion of the 'UN Convention on Contracts for the International Sale of Goods', CISG, and the rules of Conflict Laws.

2. Delivery

- 2.1 Place of performance shall be our factory in Grossostheim, Germany. Customer assumes all responsibilities and all risks shall be deemed to be transferred to the Customer when the shipment leaves the ramp in our factory. This shall also apply to partial deliveries, deliveries to a consignment location and all deliveries where we have agreed to provide additional services such as freight forwarding, packing, exportation and installation.
- 2.2 Should we have accepted a call or blanket order, the Customer shall be obligated to request delivery of the entire order quantity within 6 months from the order date.
- 2.3 Should there be any delay in the Customer's acceptance of a shipment we may, at our own discretion, have the products stored at Customer's expense or, after providing a warning and setting a deadline, sell the products for the Customer's account.

3. Delivery period, Delay

- 3.1 Indicated delivery periods are ex works. Delivery deadline shall commence upon Customer's receipt of our order confirmation and after settlement of all technical questions and after we have received all necessary documents, such as diagrams, permits, Customer required releases and all previously agreed upon advances and payments. The delivery deadline is deemed to have been met if the shipment has been declared ready for delivery prior to the expiration of the delivery deadline. All deliveries are subject to the punctual delivery of required materials from our suppliers.
- 3.2 Force Majeure, strikes, lockouts, operating breakdowns, shortages of raw materials or means of production for which we are not responsible, including delayed deliveries or failure to deliver by upstream suppliers, shall extend the delivery period accordingly and shall release us from our obligation to deliver if delivery becomes impossible as a result thereof. We are considered not to be responsible for the aforementioned circumstances, even where they occur during an existing delay. The same applies in case of additional or amended services requested by the Customer.
- 3.3 Our deliveries shall not be deemed to be in default unless the Customer has provided us with a written warning and after an indicated reasonable grace period has elapsed.
- 3.4 In the case of requested damages for delivery delays, our liability for damage compensation shall be limited to 10% of the value of our delayed delivery or service. The limitation does not apply in the case of wilful intent, gross negligence and/or damage to life, body or health. The Customer shall be obligated to promptly notify us in writing of any consequences of delay in delivery or service.

4. Prices, Terms of Payment

- 4.1 Prices quoted shall be ex works and do not include VAT, if applicable. Charges for packaging, freight and insurance shall be at the Customer's expense. All prices are understood to be exclusive of costs for returning, recycling and disposal of used equipment returned to us for disposal.
- 4.2 Invoices shall be paid in full, without deductions and must be credited to our bank account in EURO (€) immediately or by the due date indicated on the invoice. Receipt of payment is applicable. We shall accept bills of exchange or checks only on account of performance and at the Customer's expense.
- 4.3 We retain, at our sole discretion, the right at any time to deny any extension of credit to either new or existing customers and/or to request payment in full in advance of any shipment.
- 4.4 If the period between conclusion of the contract and delivery is longer than four months, we reserve the right to demand an extra charge at our discretion, corresponding to our cost increase.
- 4.5 Duly authorized returns of products free of defects are subject to an inspection- and processing fee of 15% of the invoiced value (10 euros minimum).
- 4.6 Should the Customer be in default of our payment terms, payment of all of our receivables shall be immediately due in full and we shall not be obliged to make any further deliveries regardless of the terms prescribed in current delivery contracts.
- 4.7 Should the Customer be in default of payment, default interest on arrears at a rate legally applicable shall be due and payable. The assertion of a higher claim for damages caused by default remains unaffected.
- 4.8 We reserve the right to offset accounts payable to the Customer, such as credit notes, against our claims against the Customer.

5. Retention of Title and Assignment of Future Claims

- 5.1 Products delivered shall remain our property until the complete and unconditional payment of all of our claims against the Customer. Should there exist any further claims against the Customer, we reserve our proprietary rights until Customer's complete payment of these claims.
- 5.2 The Customer shall neither consume products nor merge nor inseparably connect products subject to retention of title with other objects, which a third party may have rights to. If products subject to retention of title, however, become a component of a new object (e.g. through the connection with other objects), then we shall be a direct proportional co-owner of this object even if it constitutes a new legal entity. Our proportion of co-ownership shall be based on the relation of the invoice value of the conditional products to the value of the new object at the time of the connection.
- 5.3 The Customer may resell the products subject to retention of title in his due course of business as long as his claims from the resale have not been assigned, hypothecated or otherwise encumbered.
- 5.4 The Customer shall herewith assign to us in advance as collateral any claims against his customers from the resale of the products subject to retention of title (see clause 5.3) and/or new objects (see clause 5.2) in the amount of our invoice for the products subject to retention of title. If the Customer is not in default of payment for the products subject to retention of title, he may collect the assigned claims in his due course of business. However, he may only use the proportional proceeds for the payment of our products subject to retention of title.
- 5.5 Upon the Customer's request, we shall release collateral at our sole discretion, if and to the degree that the nominal value of the collateral exceeds 120 percent of the nominal value of our open debt claims against the Customer.
- 5.6 The Customer is required to immediately inform us of any distress, confiscation or any other disposition of a third party with regard to the products subject to retention of title or the products co-owned by us.
- 5.7 If any monetary instrument should be returned to us for insufficient funds, if debit requests or direct debit authorizations are not carried out or are retroactively cancelled, or if the Customer or the end user becomes insolvent, Customer shall lose all rights as per clause 5.3 above. The Customer must immediately notify any subsequent purchaser of our extended retention of title. He may only use the proportional proceeds, which are based on the assignment, for the payment of the products delivered.

- 5.8 In case of default of payment or those cases covered in clause 5.7, we shall be authorized to withdraw from the contract, and/or to demand the return of any products subject to retention of title being in the possession of the Customer and/or to directly collect the assigned claims (see clause 5.4). In order to determine our rights, we reserve the right to have the Customer's documents and books concerning our reserved rights examined by a person who is subject to the professional duty of confidentiality.

6. Warranty, Limitation of Liability

- 6.1 We warrant that our products are free from defects in materials and workmanship (under normal conditions of use and service) at the time of the transfer of risk. The required characteristics, shelf life and use of our products are based solely on the written contractual specification, product description and/or operating instructions. Any information beyond this and in particular in preliminary discussions, advertisement and/or referenced industrial standards shall only become a part of the contract if they are expressly referenced in writing.
- 6.2 If the Customer requires the products for purposes other than those agreed, Customer must check before use if the products are especially suitable for such purposes - including all aspects pertaining to product safety - and Customer is required to ensure that products comply with all relevant technical, legal and official regulations and requirements. We shall not be liable for the fitness of our products for any application not expressly confirmed by us in writing. Further we shall not be liable for the accuracy of designs, specifications or materials furnished or specified by the Customer and thus have no particular testing obligation. The observation of safety-related and occupational health regulations depends on the place and conditions of the product's use. The observation of these regulations is, therefore, the responsibility of the Customer.
- 6.3 The consequences of normal wear and tear of wearing parts such as pistons, seals, valves, and the breakage of glass, plastic or ceramic parts are excluded from this warranty. The warranty does also not apply for the consequences of improper handling, use, servicing or operation of the products or the consequences of chemical, electrochemical or electrical influences or the failure to follow the instructions in the operating instructions.
- 6.4 The exclusive initial remedy of Customer in the event of a justified deficiency claim is the replacement or repair (at our sole discretion) of any defective product. Any additional warranty claims shall only exist due to rejection, impossibility or failure of said subsequent performance. Additional expenses, resulting from the fact that the goods have been relocated from the initial place of delivery, shall be borne by the Customer.
- 6.5 The Customer shall be obliged to promptly and carefully check incoming products - also for product safety - and to notify us of any apparent deficiencies in writing, and of any hidden defects as soon as they become apparent. The Customer must notify the carrier immediately of any transport damage. Non-observation of the obligation to check and give notice of defects will void any and all warranty claims for those deficiencies.
- 6.6 Our liability for slight negligence is limited to claims owing to injury to life, the body or the health, to claims from product liability as well as claims from the culpable breach of essential contractual duties, through which the contract is endangered. Incidentally, our liability for slightly negligent breach of essential contractual duties is limited to the typically incurring damages which we could have foreseen when the contract was concluded.
- 6.7 If the Customer uses the delivered products with materials that are harmful to the environment, poisonous, radioactive or dangerous in any other way, Customer shall be obliged to clean them prior to any return shipment. All cleaning, decontamination, and disposal costs shall be the sole responsibility of Customer.

7. Warranty period, Limitation of Actions

- The warranty period for all our products shall be one year and starts at the time of delivery of products to the Customer. The same shall apply to claims for damages irrespective of legal basis. The period of limitations of Sec. 438, paragraph 1, no. 1 and 2, Sec. 479, paragraph 1 and Sec. 634a, paragraph 1, no. 2 of the German Civil Code remain unaffected. Any of the above limitations and or exclusions of remedies or damages shall not apply to claims according to malicious non-disclosure of a defect, to product liability and for damages from injury to life, the body or the health and for other damages, which are due to wilful intent or gross negligence.

8. Software use

- 8.1 As far as software is contained in the delivery, the Customer will be granted the non-exclusive right to use the software delivered including its documentation. Use of the software on more than one system is prohibited.
- 8.2 The Customer may only copy, transfer or translate the software in a legally acceptable scope (Sec. 69a ff. German Copyright Law (UrhG)) or convert from the object code into the source code. The Customer is obliged to not remove our and/or the Software Supplier's instructions, especially copyright entries, or to change them without our prior permission.
- 8.3 All remaining rights to the software and the documentation thereof, including copies, remain with us and/or Software Supplier. Granting of sublicenses is strictly forbidden.

9. Installation

- 9.1 Installation costs shall be invoiced monthly. Fixed installation prices shall apply to the installation work as agreed upon. In other cases our actual price list for installation and service shall apply.
- 9.2 As far as required the Customer shall be responsible for providing the following at his own expense: lighting, motive power, compressed air, water, electrical power for welding, heating including any required connections, electrical installations for the connection of the products delivered by us, the required devices (e.g., hoisting equipment), a lockable room for storing material, tools and clothing during the installation.

10. Spare Parts, Maintenance/Repair and Calibration

- 10.1 For spare parts, maintenance, repair and calibration services our current repair and replacement price list shall apply.
- 10.2 In case we have an obligation to maintain/deliver spare parts, the obligation shall be limited to a period of five years from the date of delivery of the products. As far as spare parts are not manufactured by us or are no longer available on the market, e.g. electrical components, or as far as raw materials required for spare part production are no longer available, our obligation to supply spare parts shall be void.
- 10.3 For calibration and servicing normally disposables from our production lines shall be used.
- 10.4 Any servicing and/or calibration service shall only be performed upon presentation of a proper and duly signed declaration on the absence of health hazards.
- 10.5 For service values up to 50 Euros we reserve the right to service/repair without providing a separate cost estimate.

11. Legal reservation, Industrial proprietary rights, secrecy

- 11.1 We reserve ownership in any of the tools, moulds, samples, diagrams, commercial or technical documents produced or provided by us as well as all copyrights, proprietary and intellectual property rights in any such item. This also applies if the corresponding costs are wholly or partly borne by the Customer. The Customer may use any of the above only as agreed to in writing. The Customer may neither manufacture nor have manufactured subjects of this agreement without our prior written approval.
- 11.2 If we deliver products according to designs or other requirements specified by the Customer (models, samples etc.), the Customer shall be liable by default for eventual infringements of industrial property rights or other rights of third parties by manufacturing and delivery of such products. He shall be obligated by default to provide compensation for all damages resulting from such legal infringements.
- 11.3 All information acquired through the business relationship with us which is not deemed to be public knowledge shall be deemed proprietary and may not be disclosed to any third party.
