Organic Set, large

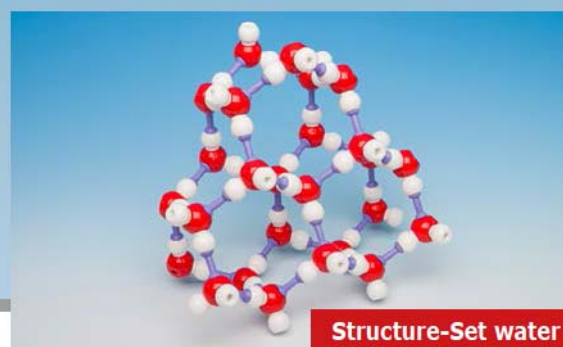

Molecular Orbital Organic

Structure-Set graphite

Original, unique system of high quality molecular models

The set consists of a variety of atom parts and links designed to make a large number of possible structures relevant to a specific chemistry subject or use, e.g. Biochemistry, Organic or Inorganic. Atom parts are made of solid clouded plastic spheres. They are available with holes from 1 to 6 in the usual angular orientations. All sets can be combined with each other.
