Innovative products, multiple solutions

Many years of international experience have made the WLD-TEC GmbH a global well respected manufacturer of spot heating systems for laboratory and industry use.

For every standard and special application, the WLD-TEC GmbH offers the optimum stationary or mobile safety laboratory gas burners as well as electrical annealing systems without an open flame.

The devices are sturdy and durable, with maximum integrated safety and extensive optional accessories.

WLD-TEC GmbH is your gas burner specialist since 1994, with research, development and production from a single source - quality made in Germany.

FUE

Fuego^{SCS}

Safety Laboratory Gas Burner

Innovative technology that thinks with you!

The *Fuego* SCS - Series.

Graphical installation instructions

Zero-pressure shut-off

Gas consumption display

Acoustic signals as operating aids

User-friendly stainless steel knobs

Animated, high-contrast graphic display

Individually adjustable Single or DoubleClick IR motion sensor

Automatic unit cut-off

Cooling reminder for inoculation loops

Temperature regulation for heating media

Fuego^{SCS} - A step ahead!

The innovative **Fuego SCS - Series** provides maximum safety and highest convenience for all flame-related applications in the laboratory.

Simply safe to operate

Depending on the model, the **Fuego SCS - Series** can be operated with touch-free IR-Sensor, button function or foot pedal.

Modern design

The unique shape is eye-catching*. The low casing makes comfortable working possible; the streamlined design reduces the disturbance of the air current in a clean room workbench to a minimum. With the new DualKnob for adjusting gas and air flow, the flame can be precisely regulated. The removable burner head can simply be dismantled into its individual components for in-depth cleaning.

Clogging is no longer a problem. Spilled liquids flow out through an integrated drain, and solid substances can be effortlessly removed by opening the burner shaft.

Universal

The **Fuego SCS - Series** can be operated with stationary natural gas and propane / butane gas supplies, cartridge gas or gas cylinders.

Top-off-the-Line safety

The Safety Control System SCS[®] means state-of-the-art safety technology which constantly analyzes potential hazards and, if necessary, initiates safety measures, such as an interruption of the gas supply. In addition to the ignition and flame control functions and the overheating protection, the new safety package also features continuous burner head control (BHC). BHC unfailingly detects burner head clogging by liquids or solid substances and ensures the correct assembly of the burner head.

Exceptional passive safety features: A residual heat display protects against burns. The automatic unit cut-off function prevents unintentional ignition of the flame when the burner has not been ignited for a longer period.

Environment-conscious

Excellent energy efficiency in accordance with the most recent standards reduces gas and power consumption. This increases the burning time when gas cartridges are used.

Take-back guarantee

All old WLD-TEC laboratory gas burners which have been taken out of service will be taken back and disposed of in an environmentally compatible manner.

Robust

Fabricated entirely of stainless steel - from the controls to the gas connection - and with displays which are protected by heat-resistant glass, the **Fuego SCS - Series** withstands even extreme laboratory conditions.

The Fuego SCS - Series:

Ideal for use on cleanroom workbenches and in laboratories.

Fuego^{SCS} basic

More than standard

The *Fuego SCS basic* can be safely operated by means of the supplied foot pedal or the button function. Different programs are available: a flexible start-stop function or the conventional foot pedal control for short-time applications. In addition, the flame can be started and stopped by briefly pressing on the function knob.

Fuego^{SCS} basic RF

Wireless operation

Wireless and safe flame sterilization! The "RF" model allows operation via radio foot pedal without a disturbing cable. Otherwise the *Fuego SCS basic RF* has the same functions and safety systems as the standard model *Fuego SCS basic*. The radio foot pedal is included in the range of delivery.

Fuego^{SCS}

Versatile

The *Fuego SCS* can be operated with the touch-free IR-Sensor, button function or foot pedal (optional). For all options, different programs exist that have been developed on the basis of practical experience: flexible start-stop functions, continuous application for up to 2 hours or programs for short flame sterilization - exact to the second.

More convenience

The animated and high-contrast graphic display can be easily read under all lighting conditions due to the blue background illumination. The self-explanatory, language-less symbol menu facilitates a rapid selection of all functions. The display is not in your line of sight? Acoustic signals additionally aid the user.

Innovative - The DoubleClick IR-Sensor

When activated, this additional safety function ensures that the burner can only be ignited by activating the DoubleClick IR-Sensor twice. The detection range and the time interval of the DoubleClick can be individually adjusted. As a result, unintentional ignition or ignition due to dropping or falling objects is virtually impossible, this increases safety considerably.

Precisely adjusted

With the new temperature regulation system and an optional temperature sensor, the laboratory gas burner becomes a temperature-control station.

Pressureless

The zero-pressure shut-down provides additional safety at the end of work. With it the residual pressure is released from the connection hose and the gas hose's service life is increased.

Gas exhausted?

No new cartridge at hand? The new gas consumption display reminds you to have a fresh gas cartridge on hand in a timely manner.

Flexible and individual

The *Fuego SCS* has 2 user accounts and saves all safety settings, burning times and other parameters for individual and flexible use.

Cooled down

The precisely adjustable, exact to the second, cooling time reminder aids you in exactly complying with the required cooling period for inoculation loops.

Properly connected!

Graphic installation and operating instructions at the first switch-on facilitate the initial start-up.

Fuego^{SCS} pro

Battery performance

The exclusive *Fuego SCS pro* provides maximum flexibility. Wireless operation using state-of-the-art rechargeable battery technology guarantees independent operation. Two standard rechargeable batteries allow up to 9 hours of continuous operation. This corresponds to approximately 2000 inoculation loop flaming operations. The *Fuego SCS pro* has an integrated fast charging function and can be recharged in just 3 hours. The range of functions is identical to those of the *Fuego SCS*.

gasprofi 1^{SCS} micro

Safety Laboratory
Gas Burner

The smallest professional among the laboratory gas burners!

The *Gasprofi 1 SCS micro* - Series.

Button function

DoubleClick
IR-Sensor

Holding device for
inoculation loop holders

Burner shaft can be opened
at the flick of a wrist for
cleaning purposes

Removable & decomposable
burner head, autoclavable,
completely made of
stainless steel and ceramics

***Gasprofi 1 SCS micro* - Series: Safety and comfort in the smallest possible space. Optimal for all flame-related applications in the laboratory.**

Simply safe to operate

Depending on the model, the *Gasprofi 1 SCS micro* - Series can be operated with touch free IR-Sensor, button function or foot pedal. With the DualKnob for adjusting gas and air flow, the flame can be precisely regulated.

More room to work

The *Gasprofi 1 SCS micro* - Series is extremely space-saving. This allows nearly effortless work as a result of its extraordinarily low working height.

Outstanding safety

The Safety Control System SCS® demonstrates state-of-the-art safety technology which constantly analyzes potential hazards and, if necessary, initiates safety measures, such as an interruption of the gas supply.

Robust

All external components are made of stainless steel; this guarantees the greatest possible working sterility. The removable burner head can simply be dismantled into its individual components for in-depth cleaning.

Clogging is no longer a problem. Spilled liquids flow out through an integrated drain, and solid substances can be easily removed by opening the burner shaft.

Universal

The *Gasprofi 1 SCS micro* - Series can be operated with stationary natural gas and propane / butane gas supplies, cartridge gas or gas cylinders.

Environment-conscious

Excellent energy efficiency in accordance with the most recent standards reduces gas and power consumption. This increases the burning time when gas cartridges are used.

***Gasprofi 1 SCS micro* - Series: Ideal for use in cleanroom workbenches and laboratories.**

gasprofi 1^{SCS} micro school edition

For optimal safety in modern schools

Bunsen burners were standard equipment in schools for many years but they were the cause of many accidents and fires. *Gasprofi 1 SCS micro school edition* changes all this! A safe gas burner for sterilizing, heating and other flame related applications.

Excellent safety due to the Safety Control System SCS®

The flame is re-ignited automatically if it goes out inadvertently. For example, if the flame is extinguished due to over-boiling of liquids and cannot be re-ignited, the burner automatically shuts the gas supply off for safety.

Easy operation

Switch flame on and off at the touch of a button. Optionally, the *Gasprofi 1 SCS micro school edition* can also be operated by a foot pedal* or an external DoubleClick IR-Sensor*.

Autoloop PRO

Carrousel for flame
sterilizing inoculation loops

Autoloop^{PRO}

The fully automatic carousel for flame sterilizing inoculation loops.

The inoculation loop carousel *Autoloop^{PRO}*, which is suitable for up to 4 inoculation loops, was developed to comply with current requirements in microbiological, cellbiological and biotechnological laboratories.

Modern design

The stable housing enables comfortable and easy access to inoculation loops. Removal positions on both sides make the carousel equally suitable for right and left handers.

More comfort

Keep all functions in view with the fully graphic display. The graphic menu control makes it easy to select all functions quickly. Flaming and cooling time can be adjusted to the second. During the flame sterilizing, the display shows the remaining flaming time. The *Autoloop^{PRO}* rotates and controls flaming automatically.

No unintentional use of hot inoculation loops: When flaming is completed, the display shows the remaining cooling time and the removal positions of cool inoculation loops. All the suspended inoculation loops can be flamed as needed in one full rotation of the carousel. For additional flame sterilization (e.g. of bottle necks or test tubes) a foot pedal* can be activated during the automatic operation. For this purpose the *Autoloop^{PRO}* turns the inoculation loop out of the flame position and enables additional flame sterilization.

More safety

The nearly perpendicular position of the inoculation loop holder protects even the sleeve nut of the holder from possible contaminations. Additionally, an intelligent sensor of the *Autoloop^{PRO}* monitors safe sterilization.

Saves energy, time and costs

Precise flame sterilization time extends the life of the inoculation loops and reduces gas consumption. Continuous working during the flaming and the cooling phases of the inoculation loops saves a great deal of time and makes it possible to work efficiently.

Robust

Fabricated entirely of stainless steel, anodized aluminium and a display, protected by heat resistant glass, the *Autoloop^{PRO}* can withstand extreme laboratory conditions.

* foot pedal optional

Easy to use

All parameters are easy to set; quick start button for immediate start.

Mount safely

Coordinated mounts and reliable optical detectors for inoculation loop holders.

Optimal sterilization

Sterilization monitor for safe sterilization of inoculation loops.

Start options

Start immediately or sterilize all inoculation loops in a full rotation.

Sterilization monitor

An intelligent sensor monitors the safe sterilization. Three setting options /off switch.

Flame time

Precise settings of the required flame sterilization time.

Additional flame sterilization

e.g. of bottle necks or test tubes during the automatic operation by activating a foot pedal.

Cooling period

The cooling time can be set for the inoculation loop material used - exact to the second.

Everything visible at a glance

Removal positions of cool inoculation loops or the remaining cooling time, residual heat display and sterilization time.

stainless steel, double length for better heating of Erlenmeyer flasks, decomposable, dishwasher-proof and autoclavable

Art.-No. 8.100.091

Tray

stainless steel, right, left or rear side for Fuego SCS - Series

Art.-No. 8.000.340

for Gasprofi 1 SCS micro - Series
Art.-No. 6.000.341

Foot pedal radio set RF Stick

cable-free foot pedal operation, simply connect the RF-Stick and control the gas burner with wireless radio technology (available in EU countries only) for Fuego SCS - Series and Gasprofi 1 SCS micro - Series (as of Serial-No. 05...)

Art.-No. 8.000.404-RF

(1) Foot pedal

stainless steel, cable length 3.0 m

Art.-No. 6.000.402

(2) Fußpedal Mini

plastic, cable length 3.0 m

Art.-No. 6.000.403

Inoculation loop holder

stainless steel, with sleeve nut, for inoculation loops with wire Ø 0.6 - 1 mm

Length 245 mm

Art.-No. 6.000.360

Length 215 mm

Art.-No. 6.000.365

Inoculation loops, wire Ø 0.6 mm

Special stainless steel

Ø 3 mm **Art.-No. 6.000.373**

Ø 5 mm **Art.-No. 6.000.375**

Platinum / Iridium

Ø 1 mm **Art.-No. 6.000.381**

Ø 3 mm **Art.-No. 6.000.383**

Ø 5 mm **Art.-No. 6.000.385**

Measuring adapter

for thermocouples, type K, temperature range from +35 °C to +350 °C (only Fuego SCS / Fuego SCS pro as of Serial-No. 12Z...)

Art.-No. 8.200.230

Thermocouple type K

(only Fuego SCS / Fuego SCS pro as of Serial-No. 12Z...)

(1) Immersion sensor Ø 3 mm with handle, sensor length 130 mm, helix connection cable

Art.-No. 8.200.240

(2) Immersion sensor Ø 1.5 mm, sensor length 150 mm, bendable, cable length 2 m

Art.-No. 8.200.241

(3) Air sensor, PTFE insulated, cable length 1 m

Art.-No. 8.200.242

Safety adapter
with integrated pressure regulator
for gas cartridges **CV 360**
Art.-No. 8.000.700
for gas cartridges **Express 444**

***F*ame¹⁰⁰**
Safety Bunsen

Safety Laboratory
Gas Burner

The *Flame¹⁰⁰* – sets new standards in the Bunsen burner class! The safe alternative for all traditional Bunsen or alcohol burners!

Multi-Use

The *Flame¹⁰⁰* is ideally suited for all flame related applications in the laboratory. The precision flame allows graduated heating of dental tools as well as safe sterilization of microbiological instruments. Flame size and intensity can be adjusted infinitely.

Easy operation

The safety Bunsen burner *Flame¹⁰⁰* activates immediately with the push of a button. No match or a pilot flame are required. Optionally, the *Flame¹⁰⁰* can also be operated by a foot pedal* or an external IR - Sensor*.

The *Flame¹⁰⁰* is suitable for stationary natural gas and propane / butane gas supplies as well as gas cartridges or gas cylinders. Numerous adapter systems are optionally available.

Reliable safety

The proven Safety Control System SCS® is also incorporated in the *Flame¹⁰⁰*. All potential hazards are constantly monitored and, if necessary, protective measures – such as the shutting off the gas supply – are activated. In addition to the ignition and flame control function and the overheating protection the safety package also features the continuous burner head control BHC. BHC unfailingly identifies burner head clogging by liquids or solid substances. Compared with a conventional Bunsen burner, the *Flame¹⁰⁰* with the safety standard "SCS" eliminates the risk of a gas leak or an explosion.

Efficient

The *Flame¹⁰⁰* is economical to operate and attractively priced for any laboratory, thus making savings for both your budget and the environment. Compared with traditional Bunsen burners, the gas consumption is reduced to a minimum, because the flame burns only when it is really needed!

Compact and sturdy

The housing and burner tube of the *Flame¹⁰⁰* are made of stainless steel. The removable burner tube makes cleaning easy and the small foot print is an advantage for any lab bench.

***Flame¹⁰⁰* - for a safe flame in the laboratory!**

* optional

Flaming
from any angle

The Flame¹¹⁰ – the extraordinary precision burner

Are you looking for a solution to heat or flame any item under any angle - even upside down?

Here is what you need: Our new precision burner Flame¹¹⁰!

Multi-talent

The Flame¹¹⁰ is ideally suited for any kind of flaming process in laboratory or industry. Its long precision flame can heat your dental instruments, can sterilize your microbiological tools or flame deburr resp. flame polish your moulded plastic or rubber parts in any type of industrial production. Always safe and perfect!

Simple and safe handling

Simply push the button: Flame will start or stop instantly! You may also control it by foot pedal* or external IR - Sensor*. Safety is built-in and always active (overheat protection and automatic re-ignition).

Compact and efficient

Stainless steel, efficient cleaning, small footprint, exclusive variability and convincing economics are vital for any type of laboratory and industrial workstation. Flame¹¹⁰ is offering a perfect combination of features:

- Variable flame from any angle – even upside down
- Safety in any operation mode
- Very easy cleaning of removable burner head
- Operation with liquid gas from cylinders or cartridges (with optional adapters)
- Very economic consumption of gas

smart **SteriMax**

Sterilizing

New

SteriMax basic

by IR-HotSpot

Efficient use of energy

No air turbulences

Infrared loop sterilizer - using IR-HotSpot technology

High-Speed annealing and sterilizing the smartest way

Are you looking for a fast, efficient and flameless product to anneal or sterilize your inoculation loops and delicate micro instruments? Then our electrical *SteriMax basic / smart* should be your first choice – ideally suited for use in any type of lab, anaerobic work environment and Laminar Flow Cabinet!

Smart infrared light – instantly ready to work

Specifically focused infrared light generates an IR-HotSpot in which your inoculation loop is sterilized at temperatures from 750 to 1000°C after only 5 to 10 seconds. The *SteriMax basic / smart* just needs to be plugged in and will be immediately ready to use, without any warm-up period!

Our highly sophisticated annealing tube is based on many years of experience. It is made of special quartz glass. The tube is closed at one end preventing any risk of contamination with pathogenes. The annealing tube can be slid out in a matter of seconds for easy cleaning.

Smart operation – comfortable working

SteriMax basic / smart allows you to fully focus on your core task. Hardly any attention is needed for inserting your inoculation loop into the annealing tube – which is easily accessible from the front of the flat glass panel. Depending on the model you can start the sterilization process via touch panel, IR-Sensor or foot pedal*.

Smart use of energy – minimum heat dissipation

"Thermocontrol" is the key element for an efficient use of energy. It allows a quick but smooth softstart of the infrared light, a short heating period and the re-use of residual heat for the next sterilization process. Whenever you pause, your energy consumption and heat dissipation will pause as well.

Smart design – outstanding features

SteriMax smart / basic is presented in an elegant stainless steel housing with a safety glass touch panel designed for extreme laboratory environments with many unique features.

- Instantly ready to work without any warm-up period
- No danger of combustion on the housing (Cool-Touch)
- Comfortable touch operation
- Efficient use of energy through Thermocontrol
- Annealing tube made of special quartz glass
- Very simple cleaning of the device and annealing tube

* optional

Cool-Touch

SteriMax^{basic}

The sterilization process starts with just a fingertip on the touch panel or by pushing the foot pedal*.

A fixed timer (10 sec.) controls the annealing of your instruments automatically.

Thermocontrol uses the residual heat and automatically shortens the energy supply for the next sterilization.

The course of the sterilization can be followed from start to end by looking upon the inoculation loop symbol.

After that your inoculation loop is ready for use!

*optional

SteriMax^{smart}

Touchless IR-Sensor technology starts the sterilization process automatically.

The timer can be viewed and adjusted (exact to the second) for 2 different user accounts simply by touching the panel.

Thermocontrol is using the residual heat and automatically reduces the time of sterilization up to 5 seconds.

2 adjustable timers indicate the completion of the sterilization period (5 - 10 sec.) and cooling down process (0 - 25 sec.) via the display and an audible signal.

After that your inoculation loop is ready for use!

SteriMax

Annealing without Flame

Annealing without Flame!

The electrical sterilization system *SteriMax* is most suitable for the sterilization of inoculation loops, needles and instruments. It is ideal for laboratories and safety cabinets where the use of gases and open flames is not permitted.

Robust

The unique double tube system, which is made of robust quartz glass and wear-resistant ceramic, reaches its optimal temperature of 900°C after only a few minutes. To sterilize the inoculation loop, simply insert it into the ceramic annealing tube. After 5 - 7 seconds, the inoculation loop is sterilized*. A back side spray protector is integrated for more safety when handling with pathogenic material. Even clogging is not an issue. The ceramic annealing tube can be removed easily for in-depth cleaning. A 100% stainless steel design makes the *SteriMax* resistant to even the most extreme laboratory conditions.

Flexible and safe

The sterilization tube can lock itself into place, using the specially designed angular adjusting device. The low and stable housing facilitates ergonomic operation; the unique design protects the working surface from contamination. Exceptional passive safety feature: After prolonged use, the residual heat display signals a hot surface of the sterilization tube in order to protect the user from burns.

- **Stainless steel design**
- **Long - lasting double tube system**
- **Sterilization period 5-7 seconds***
- **Self - locking angular adjustment**
- **Two different sizes available**

with 7 angular adjustments
Residual heat display
Inoculation loop holder and inoculation loop
Tray for 3 instruments, screwdriver
Instruction manual
2-year warranty (except parts of wear and tear)

Short version:

Diameter Ø 15 mm, length 118 mm:

for 230 V mains voltage
for 120 V mains voltage
for 100 V mains voltage

Art.-No. 5.001.000

Art.-No. 5.002.000

Art.-No. 5.003.000

Long version:

Diameter Ø 20 mm, length 161 mm:

for 230 V mains voltage
for 120 V mains voltage
for 100 V mains voltage

Art.-No. 5.101.000

Art.-No. 5.102.000

Art.-No. 5.103.000

made

Germany

Technical Data:

Short version

Ceramic annealing tube: Ø 15 mm, length 118 mm
Quartz glass heating element: Ø 21 mm
Power consumption: 160 W
Weight: 960 g
Measurements (w x h x d): 175 x 129 x 139 mm
Heating up time: 700 °C / 11 minutes
800 °C / 14 minutes
900 °C / 24 minutes

Heat transfer:

a stainless steel surface located above,
warms up at motionless air and at an
ambient temperature of 20°C; Distance:
20 cm: 65°C, 30 cm: 34°C, 40 cm: 28°C

Long version

Ceramic annealing tube: Ø 20 mm, length 161 mm
Quartz glass heating element: Ø 26 mm
Power consumption: 225 W
Weight: 1060 g
Measurements (w x h x d): 175 x 129 x 169 mm
Heating up time: 700 °C / 15 minutes
800 °C / 22 minutes
900 °C / 40 minutes

Heat transfer:

a stainless steel surface located above,
warms up at motionless air and at an
ambient temperature of 20°C; Distance:
20 cm: 65°C, 30 cm: 40°C, 40 cm: 32°C

All models

Angular adjustments: 7
Sterilization temperature: 900°C - 950°C
Sterilization time: 5 - 7 seconds*
Safety features: residual heat display
Casing: stainless steel, UV and solvent resistant
CE: EN 61326-1, EN 61010-1, EN 61010-2-010
EU guidelines: 2014/30/EU, 2014/35/EU, 2011/65/EU

* tested with inoculation loops, WLD-TEC **Art.-No. 6.000.373**

powerjet 2

Mobil sterilizing

The mobil handheld laboratory gas burner with piezoelectrical ignition

The solution for all flame sterilization processes in microbiology or biotechnical fields. The burner ignites immediately by pressing the button. The flame can be regulated in size and will be extinguished again by releasing the button.

Additional the button of the powerjet / powerjet 2 is equipped with a locking device. The locking device comprises both, short and long term ranges.

powerjet

- Automatic ignition due to piezo effect
- For propane / butane gas cartridges
- Connection for gas cartridges CG 1750
- Gas supply only when button is pressed
- Stainless steel stand (optional)
- Safe handling due to one-handed operation

powerjet 2

- Automatic ignition due to piezo effect
- For propane / butane gas cartridges and natural gas
- Connection for gas cartridges or gas tubing
- Gas supply only when button is pressed
- Stainless steel stand
- Safe handling due to one-handed operation

The range:

powerjet

Art.-No. 6.005.000

for propane / butane gas cartridges with 7/16" x 28 UNEF thread
(e.g. CG 1750 from Campingaz)
Instruction manual, 2-year warranty

Technical Data:

Gas types:	liquid gas, gas cartridges
Connected load:	0.12 kg / h liquid gas
Flame temperature:	1350°C liquid gas
Temp. threshold level:	1.54 kW liquid gas
Measurements (w x h):	150 x 180 mm
Weight:	300 g

* gas cartridge is not included in the delivery range

The range:

powerjet 2

Art.-No. 6.006.000

for propane / butane gas cartridges and natural gas
Adapter for gas cartridges CV 360 from Campingaz
Tubing connector with swivel nut, stainless steel stand
Nozzle for natural gas (08)
Nozzle for propane / butane gas (06)
Nozzle-box spanner, wrench 14 / 17 mm
Instruction manual, 2-year warranty

Technical Data:

Gas types:	natural gas E/LL, liquid gas II _{2ELL3B/P} 20 - 50 mbar gas cartridge CV 360 (Campingaz) / Express 444
Connected load:	0.13 kg / h liquid gas
Flame temperature:	1350°C liquid gas, 1300°C natural gas (E)
Temp. threshold level:	1.7 kW liquid gas, 1 kW natural gas
Measurements (w x h):	150 x 210 mm
Weight:	500 g

* gas cartridge is not included in the delivery range

**Stainless steel stand
for powerjet**
Art.-No. 6.000.816

(1) CG 1750 gas cartridge
(2) CV 360 gas cartridge
(3) Express 444 gas cartridge
see page 19

**powerjet 2
gas cartridge adapter for
Express 444 gas cartridges**
Art.-No. 6.006.080

Notes

This image shows a single sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There are no margins or other markings on the paper.
